General note: Since the third quarter of 2015, the total stake in Garanti is consolidated by the full integration method. For previous periods, the financial information provided in this document is presented integrated in the proportion corresponding to the percentage of the Group's stake then (25.01%).

(1) The capital ratios are calculated under CRD IV from Basel III regulation, applying a 60% phase-in for 2016 and a 40% for 2015.

Group information

Relevant events

Results (pages 4-9)

- Year-on-year figures are affected by changes in the Group's scope of consolidation in the second and third quarter of 2015 (**Catalunya Banc -CX-** and **Garanti**, respectively).
- Although the negative effect of **exchange rates** has eased, the cumulative impact through September continues to be significant.
- Taking into account the stake in Garanti in comparable terms, i.e. including it as if it had been incorporated by the full integration method since January 1, 2015, if the impact of corporate operations from January through September 2015 is excluded, and if the exchange-rate effect is isolated, the most relevant aspects in terms of cumulative earnings are as follows:
 - Very favorable performance of the **most recurring revenue**, thanks to growth in activity, mainly in emerging economies, and maintenance of customer spreads.
 - Positive contribution from **NTI**, due basically to sales in ALCO portfolios, the capital gains registered by the VISA Europe transaction in the second quarter and the sale of 0.75% of the BBVA Group's stake in China Citic Bank (CNCB) in the third quarter.
 - Significant reduction in the year-on-year rate of growth of **operating expenses**, despite the fact that they are still strongly influenced by the incorporation of CX, high inflation in some countries and the exchange-rate effect.
 - Further decline of **impairment losses on financial assets** and **real-estate** provisions.

Balance sheet and business activity (pages 10-11)

- The **loan book** has performed strongly YTD in emerging economies. There has been a decline in Spain, since the favorable performance of new production has not offset the existing level of repayments. In the United States, the area's strategy of selective growth in the most profitable segments explains its performance, which has been virtually flat since the end of 2015.
- Non-performing loans** have continued to decline, particularly in the domestic sector.
- Customer **deposits** under management have performed well in the most liquid headings in the domestic sector and in time deposits in the non-domestic sector
- The performance of **off-balance-sheet customer funds** has improved compared with the previous quarter.

Solvency (page 12)

- Capital** position above regulatory requirements. At the close of September 2016, the fully-loaded CET1 ratio stood at 11.0%, thanks to strong generation of capital during the quarter. This will enable the 11% target to be reached ahead of schedule.
- The fully-loaded **leverage** ratio closed at 6.6%, which compares very favorably with the rest of the peer group.

Risk management (pages 13-14)

- The improvement in the main **asset quality** indicators continues: At the close of September 2016, the NPL ratio had declined, the cost of risk remained stable and the coverage ratio had fallen slightly compared with the figures reported as of 30-Jun-2016. There is a clear improvement on the data reported as of December 2015.

The BBVA share (pages 15-16)

- There was a new bonus share issue in October to implement the "**dividend-option**". On this occasion, the holders of 87.85% of the free allocation rights chose to receive new shares, which once more demonstrates the success of this remuneration system.

Other matters of interest

- The number of **digital and mobile customers** continues to increase (up 12% and 23% since December 2015, and up 20% and 41% in year-on-year terms, respectively, according to latest data available).

Results

BBVA Group's earnings for the **first nine months of 2016** continue to be affected by the changes in the scope of consolidation in the second and third quarter of 2015 (CX and Garanti, respectively), the negative impact with respect to the same period last year of exchange rates against the euro of the main currencies that affect the Entity's financial statements, and the lack of corporate operations. Unless expressly indicated otherwise, to better understand the changes in the Group's main earnings figures, the year-on-year percentage changes given below refer to constant exchange rates.

In addition, in order to make the year-on-year comparison easier, the end of this section includes an income statement with rates of change that take into account **Turkey in comparable terms**, i.e. including BBVA's stake in Garanti as if it had been incorporated by the full integration method since January 1, 2015.

BBVA Group posted a **net attributable profit** of €2,797m in the first nine months of 2016, a significant increase on the figure for the same period last year (up 111.9%). Not including 2015 corporate operations, earnings have grown by 15.0% (up 10.8% with Turkey in comparable

(1) From the third quarter of 2015, BBVA's total stake in Garanti is consolidated by the full integration method. For previous periods, Garanti's revenues and costs are integrated in the proportion corresponding to the percentage of the Group's stake then (25.01%).

(2) 2015 includes the capital gains from the various sale operations equivalent to 6.34% of BBVA Group's stake in CNCB, the badwill from the CX operation, the effect of the valuation at fair value of the 25.01% initial stake held by BBVA in Garanti and the impact of the sale of BBVA's 29.68% stake in CIFH.

terms). In general, this positive trend continues to reflect the good performance of revenues, the restriction on the rate of growth of operating expenses, reduction in impairment losses on financial assets, and the decline in provisions (net) and other gains (losses).

Gross income

The Group's cumulative **gross income** was €18,431m, a rise of 16.2% on the same period in 2015 (up 7.1% with Turkey in comparable terms). All the items making up gross income performed well, except for other operating income and expenses.

Net interest income rose by 3.0% over the quarter, and thus cumulative growth for the first nine months is 18.1% compared with the same period in 2015 (up 7.0% with Turkey in comparable terms), thanks to increased activity, mainly in emerging geographical areas, and the defense of customer spreads.

Gross income

(Million euros)

(1) At constant exchange rates: +16.2%.

By business areas there has been a positive performance in Turkey, Mexico, South America and the United States. In Spain and the Rest of Eurasia, the figure has declined as a result of the lower business volume and the current environment of very low interest rates, which has led to a narrowing of spreads.

Net interest income/ATA

(Percentage)

Positive performance of **income from fees and commissions**, which over the first nine months of 2016 increased by 12.5% year-on-year (up 4.0% with Turkey in comparable terms), strongly supported by the good performance of the United States, Turkey, Mexico and South America. This is despite the smaller number of transactions from wholesale businesses.

As a result, **more recurring revenues** (net interest income plus fees and commissions) has increased year-on-year by 16.8%, or 6.3% with Turkey in comparable terms.

NTI increased year-on-year by 24.3% in the first nine months of the year (up 29.5% with Turkey in comparable terms), mainly due to: sales in ALCO portfolios, the capital gains from the VISA Europe transaction in the second quarter and the sale of 0.75% of BBVA Group's stake in CNCB in the third quarter.

The **dividends** heading mainly includes those from the Group's stakes in Telefónica and CNCB. In the first nine months of

Net interest income plus fees and commissions

(Million euros)

(1) At constant exchange rates: +16.8%.

2016 the figure has risen by 18.3% on the same period in 2015, strongly influenced by the payment in the second quarter of the CNCB dividend (which was not booked last year).

Lastly, **other operating income and expenses** is lower due to the booking in the second quarter of the contribution of €122m to the new Single Resolution Fund (SRF). In 2015, the contribution was made to the FROB in the fourth quarter. It should be highlighted that the net contribution of the insurance business increased by 14.6% in a year-on-year comparison.

Operating income

There has been a significant decline in the year-on-year increase in **operating expenses**, which in the cumulative figure through September 2016 rose by 14.8% (up 7.4% with Turkey in comparable terms), despite the inclusion of CX expenses

Breakdown of operating expenses and efficiency calculation

all through the year (from April 24th in 2015), the high level of inflation in some geographical areas where BBVA operates, and the negative effect that currency depreciation has had on cost items denominated in dollars and euros.

As a result, the cumulative **efficiency** ratio through September remains at the 51.8% of the first half of 2016 (51.5% in September 2015) and **operating income** has risen by 17.7% (up 6.9% with Turkey in comparable terms).

Efficiency

Operating income

(Million euros)

(1) At constant exchange rates: +17.7%.

Number of employees

Number of branches

Number of ATMs

Provisions and others

Impairment losses on financial assets for the third quarter were very similar to those of the previous quarter. As a result, the cumulative figure through September continues the decline observed in previous periods, with a year-on-year fall of 2.4% with Turkey in comparable terms (up 3.7% not taking into account the changes in the scope of consolidation). By business area, the decline in the euro area continues, while in

Mexico and South America the moderate increases have not negatively affected the year-on-year changes in the cost of risk. There was growth in Turkey, strongly influenced by the negative impact of the depreciation of the Turkish lira and the increase in provisions in Romania. Lastly, in the United States, the rise in provisions following the downgrade in the rating of some companies that operate in the energy (exploration & production) and metals & mining (basic materials) sectors in the first quarter of 2016 has had a negative effect on the cumulative figure of this heading.

Impairment losses on financial assets

(Million euros)

(1) At constant exchange rates: +3.7%.

Lastly, there was a decline in both **provisions** (down 12.4% year-on-year or down 13.1% with Turkey in comparable terms), despite including a provision of €94m in the third quarter for restructuring costs, and **other gains (losses)** (down 37.5% year-on-year, or down 36.4% with Turkey in comparable terms), due largely to lower impairments of real-estate activity in Spain.

Profit

Net income from ongoing operations grew by 33.2% in year-on-year terms (up 14.4% with Turkey in comparable terms).

Net income from ongoing operations

(Million euros)

(1) At constant exchange rates: +33.2%.

The **results from corporate operations** heading does not include any transaction in this period. The cumulative figure for the first nine months of 2015 (which totaled a loss of €1,113m) included capital gains from the various sale transactions equivalent to 6.34% of BBVA Group's stake in CNCB, the badwill generated from the CX operation, the impact of the valuation at fair value of the initial 25.01% stake in Garanti and the impact of the sale of 29.68% stake in CIFH.

Net attributable profit

(Million euros)

(1) At constant exchange rates: +111.9%.

Earnings per share

(Excluding corporate operations. Euros)

ROA and RORWA

(Percentage)

By **business area**, banking activity in Spain has generated €936m, real-estate activity in Spain generated a loss of €315m, the United States contributed €298m, Turkey €464m, Mexico €1,441m, South America €576m and the Rest of Eurasia €101m.

The Group's income statement with Turkey in comparable terms

To ensure comparable figures, the Group's income statement with year-on-year rates of change and Turkey in comparable terms is presented below (to isolate the effects of the purchase of an additional 14.89% stake in Garanti, as explained above).

ROE and ROTE

(1) Variations taking into account the financial statements of Garanti Group calculated by the full integration method since January 1, 2015, without involving a change of the data already published.

(2) 2015 includes the capital gains from the various sale operations equivalent to 6.34% of BBVA Group's stake in CNCB, the badwill from the CX operation, the effect of the valuation at fair value of the 25.01% initial stake held by BBVA in Garanti and the impact of the sale of BBVA's 29.68% stake in CIFH.

Balance sheet and business activity

The rates of change of BBVA Group's balance-sheet and business activity balances from the end of December 2015 to the close of September 30, 2016 continue to be negatively affected by the depreciation of **exchange rates** against the euro. The most notable aspects in this period are summarized below:

- Decline in **gross lending to customers**. In the domestic sector, the decline despite the good performance of new production can be explained by the trend in activity in the wholesale business and with institutions and because

repayments in the mortgage segment continue to be higher than new production. In the non-domestic sector, the decline can be explained by the negative impact of exchange rates, as excluding this effect lending continues to be strong, above all in emerging geographical areas (Turkey, Mexico and South America).

- **Non-performing loans** have continued the decline of previous quarters, particularly in the domestic sector (banking and real-estate activity in Spain) and in Mexico.

(1) Since the third quarter of 2015, BBVA's total stake in Garanti is consolidated by the full integration method. For previous periods, Garanti's assets and liabilities are integrated in the proportion corresponding to the percentage of the Group's stake then (25.01%).

Loans and advances to customers (gross)

(Billion euros)

(1) At constant exchange rates: +0.3%.

- The Group's **deposits from customers** have fallen YTD, strongly influenced by the significant reduction within the domestic sector in the balances from the public sector (down 60%), and to a lesser extent, by the adverse foreign-currency effect mentioned above. Of particular note is the positive performance of lower-cost funds (current and savings accounts) in the domestic sector and time deposits in the non-domestic sector.
- Off-balance-sheet funds** have improved on the figure for the first half of the year, closely linked to the positive performance of mutual and pension funds in Spain and the rest of the world.

Capital base

BBVA Group closed September 2016 with a **fully-loaded CET1** ratio of 11.0%. This enables the 11% fully-loaded CET1 target to be met ahead of schedule (in 2017).

Over the quarter, 29 basis points of fully-loaded CET1 were generated. The increase in the ratio is a result of the recurring generation of earnings in the Group, as well as the reduction in risk-weighted assets (RWA) (down 1.3% over the quarter under fully-loaded criteria) due to the Group's focus on optimizing capital consumption. These results were produced despite Moody's downgrade of Turkey's sovereign debt rating, leading to an increase in RWA and thus a negative impact on the Group's fully-loaded CET1 ratio of 15 basis points.

Another relevant aspect linked to the changes in the capital base is related to **shareholder remuneration**. In April a "dividend-option" program was completed, in which the holders of 82.13% of free allocation rights chose to receive bonus BBVA shares; in July a cash amount of €0.08 per share was paid, amounting to a disbursement of €518m; and in October a further "dividend-option" program was implemented, which has once more had a great uptake, as holders representing 87.85%

of the free allocation rights have chosen to receive new BBVA shares. The remaining 12.15% have sold their free allocation rights, either to BBVA at a fixed price of €0.08 gross per right, or on the market. Specifically, a total of 86,257,317 ordinary new shares were issued under this last "dividend-option" program, increasing the capital by €42,266,085.33.

It is worth of note that from a **fully-loaded** perspective, **Tier 1** and **Tier 2** are also above minimum requirements. Thus, BBVA has covered all required buckets.

In **phased-in** terms, the **CET1** ratio was 12.3%, the **Tier 1** ratio closed at 13.0% and the **Tier 2** ratio at 3.0%, giving a total capital ratio of 15.9%. The CET1 ratio is above the regulator's requirements and the systemic buffers applicable to BBVA Group in 2016 (9.75%).

Lastly, the Group maintains a high **leverage ratio**: 6.6% under fully-loaded criteria (6.8% phased-in), which compares very favorably with the rest of its peer group.

Ratings

Since the previous presentation of quarterly results in July 2016, none of the credit rating agencies have modified BBVA's rating. It therefore remains at the levels shown in the accompanying table.

Evolution of fully-loaded capital ratios

(Percentage)

Ratings

Rating agency	Long term	Short term	Outlook
DBRS	A	R-1 (low)	Stable
Fitch	A-	F-2	Stable
Moody's ⁽¹⁾	Baa1	P-2	Stable
Scope Ratings	A	S-1	Stable
Standard & Poor's	BBB+	A-2	Stable

(1) Additionally, Moody's assigns an A3 rating to BBVA's long term deposits.

(1) The capital ratios are calculated under CRD IV from Basel III regulation, applying a 60% phase-in for 2016 and a 40% for 2015.

(2) Temporary data.

Risk management

Credit risk

At the close of the **third quarter** of 2016, BBVA Group maintained the positive trend in the variables related to credit risk management. Thus:

- **Credit risk** has fallen by 2.2% over the quarter and 2.1% since the close of 2015 (down 0.7% and up 0.5%, respectively, at constant exchange rates). Credit activity has been strong in Mexico, Turkey and South America, down in Spain and practically flat in the United States since the close of 2015.
- **Non-performing loans**, which account for 5.1% of the Group's total credit risk, have once more performed well since the start of the year. Over the last three months the balance has fallen by 2.3%: Banking Activity in Spain (down 4.1%), Real-Estate Activity in Spain (down 3.4%) and Mexico (down 3.8%) were the areas mainly responsible for the decline, as was the case in the previous quarter. South America registered an increase of 1.2%, the United States of 4.9% and Turkey of 3.3%.
- The Group's **NPL ratio** continues to improve (down 1 basis point over the last three months and down 25 basis points since the start of the year) to 5.1% as of 30-Sep-2016.

Non-performing loans

(Million euros)

- **Loan-loss provisions** have fallen by 4.7% on the figure for June (down 3.5% excluding the exchange-rate effect), due to declines in all the geographical areas except for South America (up 0.8%), the United States (up 0.6%), Turkey (up 0.3%) and Rest of Eurasia (up 1.9%).

(1) Temporary data.

- The **coverage ratio** stands at 72%.
- Lastly, the cumulative **cost of risk** as of September remains stable at the levels of the close of the first half of 2016 (0.92%), well below the figure for the same period in 2015 (1.10%).

Structural risks

Liquidity and funding

Management of **liquidity and funding** aims to finance the recurring growth of the banking business at suitable maturities and costs, using a wide range of instruments that provide access to a large number of alternative sources of finance, always in compliance with current regulatory requirements.

A core principle in BBVA's management of the Group's liquidity and funding is the financial independence of its banking subsidiaries abroad. This principle prevents the propagation of a liquidity crisis among the Group's different areas and ensures that the cost of liquidity is correctly reflected in the price formation process.

In the first nine months of 2016 liquidity and funding conditions have remained comfortable across BBVA Group's global footprint.

- The financial soundness of the Group's banks is based on the funding of lending activity, basically through the use of customer funds.
- On the euro balance sheet, total deposits have shown a stable trend, despite the current environment of low interest rates. This is also the case in the United States.
- In Mexico, deposits show a positive evolution.
- In Turkey, the domestic environment also remains stable, with no tensions affecting the sources of funding, and supported by the measures adopted by the Central Bank of Turkey (CBRT).
- In the rest of the emerging economies, the liquidity and funding situation in both local currencies and dollars remains, likewise, stable.
- BBVA S.A. completed an issue of internationalization bonds for €1,500m with a 3-year maturity, with the aim to increase its available collateral. It is the first issue of this kind carried out in Spain.
- The long-term wholesale funding markets have remained stable in the other geographical areas where the Group operates. There have been no international securities issues.
- Short-term funding has also continued to perform positively, in a context marked by a high level of liquidity.
- With respect to the new LCR regulatory liquidity ratio, BBVA Group keeps levels over 100%, clearly higher than demanded by regulations (over 70% in 2016), both at Group level and in all its banking subsidiaries.

Foreign exchange

Foreign-exchange risk management of BBVA's long-term investments, basically stemming from its franchises abroad,

aims to preserve the Group's capital adequacy ratios and ensure the stability of its income statement.

The third quarter of 2016 has been marked by the maintenance of the quantitative easing (QE) measures applied by the European Central Bank and the Bank of Japan, the delay in interest rate hikes by the Federal Reserve (Fed) until economic figures strengthen, and some volatility in Turkey. Against this background, BBVA has maintained a policy of actively hedging its investments in Mexico, the United States, Chile, Colombia, Peru and Turkey. In addition to this corporate-level hedging, dollar positions are held at local level by some of the subsidiary banks. The foreign-exchange risk of the earnings expected from the international subsidiary banks for 2016 and 2017 has also been managed.

Interest rates

The aim of managing **interest-rate risk** is to maintain sustained growth of net interest income in the short and medium term, irrespective of interest-rate fluctuations.

So far in 2016, the results of this management have been satisfactory, with limited risk strategies in all the Group's banks aimed at improving profitability. The amount of NTI generated in Europe and the United States is the result of prudent portfolio management strategies, particularly of sovereign debt, in a context marked by low interest rates. Portfolios are also held in Mexico, Turkey and South America, mainly of sovereign debt, to optimize the balance-sheet structure.

The debt markets have only had a very limited reaction to the UK's Brexit referendum to leave the European Union. In Turkey, despite geopolitical tensions and the downgrade of Moody's credit rating, the markets have shown resilience, helped by the global stability registered in the third quarter.

Economic capital

Attributable economic risk capital (ERC) consumption at the close of August, in consolidated terms, stood at €38,328m, practically flat over the quarter (up 0.5%). The increase of ERC in structural interest-rate risk and equity risk is offset by the reductions in market risk and fixed-asset risk.

Attributable economic risk capital breakdown

(Percentage as of August 2016)

The BBVA share

According to the latest information available, **global growth** is slightly below 3% in year-on-year terms. The improvement in the developing economies is not yet sufficient to offset the slowdown in emerging markets. The impact of "Brexit" on the financial markets has been temporary and is not likely to have significant effects on GDP in 2016 and 2017 in the rest of Europe, although uncertainty associated with the negotiations and the type of agreements between the United Kingdom and the EU are risk factors. At the same time, the U.S. economy is recovering, but remains subject to the uncertainty surrounding the presidential elections. The pace of normalization of the Fed's monetary policy is another factor of uncertainty, with potentially global repercussions. Geopolitical tension in some geographical areas completes this outlook of global uncertainty for 2016 and 2017. In the longer term, the performance of the Chinese economy, which is growing in line with expectations but is still vulnerable due to the country's high level of debt, will continue to determine the forecasts for global growth and, in particular, for emerging economies.

Against this backdrop, the main **stock-market indices** have posted gains with respect to the close of the previous quarter. In Europe, the Stoxx 50 was up by 1.1%, while in the Eurozone, the Euro Stoxx 50 gained 4.8%. In Spain, the Ibex 35 has also gained 7.5%. The S&P 500, which tracks the share prices of U.S. companies, closed the quarter with a 3.3% increase.

This has also been the trend in the share prices of the **banking sector**. The European bank index Stoxx Banks, which includes British banks, gained 11.7% over the quarter, while the Eurozone bank index, the Euro Stoxx Banks, was up 11.2%. In the United States, the S&P Regional Banks sector index gained 9.8% on its level at the close of the second quarter.

The price of the **BBVA share** also increased over the quarter, reaching 5.38 euros as of 30-Sep-2016, 6.3% above the price at the end of June.

BBVA share evolution compared with European indices

(Base indice 100=30-09-2015)

The BBVA share and share performance ratios

	30-09-16	31-12-15
Number of shareholders	947,244	934,244
Number of shares issued	6,480,357,925	6,366,680,118

Yield (dividend/price; %) ⁽¹⁾	6.9	5.5

(1) Calculated by dividing shareholder remuneration over the last twelve months over the closing price at the end of the period.

As regards **shareholder remuneration**, the Board of Directors of BBVA approved at its meeting on September 28, 2016 a capital increase against voluntary reserves, in accordance with the terms agreed at the Annual General Meeting of March 11, 2016, to develop the "dividend-option" shareholder remuneration system. This system offers BBVA shareholders the chance to choose between receiving all or part of their remuneration in either new BBVA shares or in cash. The number of free allocation rights needed to receive a new share is 66. Holders of 87.85% of these rights opted to receive new shares, an acceptance percentage that continues to be high and once again confirms its popularity among BBVA shareholders.

Shareholder remuneration

(Euros -gross-/share)

The number of BBVA shares as of 30-Sep-2016 remains at 6,480,357,925. However, the **number of shareholders** has increased by 0.8% over the quarter to 947,244. Residents in Spain hold 47.8% of the share capital, while the percentage owned by non-resident shareholders stands at 52.2%.

Shareholder structure

(30-09-2016)

Number of shares	Shareholders		Shares	
	Number	%	Number	%
Up to 150	199,446	21.1	14,568,833	0.2
151 to 450	194,655	20.5	53,112,027	0.8
451 to 1,800	297,384	31.4	285,724,863	4.4

9,001 to 45,000	52,322	5.5	912,218,345	14.1
More than 45,001	6,809	0.7	4,440,377,784	68.5
Total	947,244	100.0	6,480,357,925	100.0

BBVA **shares** are traded on the Continuous Market of the Spanish Stock Exchanges and also on the stock exchanges in London and Mexico. BBVA American Depositary Shares (ADS) are traded on the New York Stock Exchange and also on the Lima Stock Exchange (Peru) under an exchange agreement between these two markets. Among the main stock-market indices, BBVA shares are included on the Ibex 35 and the Euro Stoxx 50, with a weighting of 7.7% in the former and 1.7% in the latter. They are also listed on several sector indices, such as the Stoxx Banks, with a weighting of 4.5%, and the Euro Stoxx Banks, with a weighting of 9.9%.

Lastly, BBVA maintains a significant presence on the main international **sustainability indices**, or ESG (Environmental, Social and Governance) indices, which evaluate the performance of companies in this area, as summarized in the table below.

Sustainability indices on which BBVA is listed as of 30-Sep-2016

	2016 Constituent MSCI Global Sustainability Indexes	Listed on the MSCI Global Sustainability indices
(1)		AAA Rating
	FTSE4Good	Listed on the FTSE4Good Global, FTSE4Good Europe and FTSE4Good IBEX indices
	SUSTAINALYTICS	Industry leader according to the latest ESG 2015 rating
	EURONEXT vigeo	Listed on the Euronext Vigeo Eurozone 120
	ETHIBEL EXCELLENCE	Included on the Ethibel Excellence Investment Register
	CDP DRIVING SUSTAINABLE ECONOMIES	In 2015, BBVA received a score of 94 points for disclosure and a Band C rating for performance

(1) The inclusion of BBVA in any MSCI index, and the use of MSCI logos, trademarks, service marks or index names herein, do not constitute a sponsorship, endorsement or promotion of BBVA by MSCI or any of its affiliates. The MSCI indices are the exclusive property of MSCI. MSCI and the MSCI index names and logos are trademarks or service marks of MSCI or its affiliates.

Responsible banking

The current environment still demands a change in behavior and a new focus from financial institutions. At BBVA we respond to this social demand through a **differential model** of banking, which we call responsible banking, based on the search for return adjusted to principles, strict compliance with legality, best practices and the creation of long-term value for all our stakeholders. Of note in this regard is the signing in July of an agreement between BBVA Group and the Regional Government of Catalonia for the implementation of a social housing project. BBVA will transfer 1,800 homes to the Regional Government for families in a situation of social vulnerability. The Regional Government will implement a social insertion plan as part of this agreement.

Financial Literacy

With the aim of raising awareness of the importance of financial literacy in the lives of people, and helping to train consumers to be more aware and better informed about banking products, **BBVA Chile** has just implemented its new web site educacionfinancierabbva.cl. Over 10,300 young people in Chile, of whom 60% live in remote regions far from the capital, have taken part this year in **Liga de Educación Financiera BBVA** (BBVA Financial Literacy League), a program designed to teach good financial habits to students aged 14 to 17.

For the second year in a row, the **BBVA Provincial Foundation** has held the ceremony for the presentation of its **“Adelante con la educación”** (Forward with Education) awards. Their aim is to recognize students and teachers who participate in its educational programs.

Products with a high social impact

Financial inclusion

BBVA has received recognition at the **ECOFIN awards**, as the best “International Brand-Image of Spain” in 2016. The award recognizes the work of the **BBVA Microfinance Foundation** (FMBBVA) and the advice BBVA provides to companies expanding abroad.

Support for SMEs

BBVA and the **European Investment Bank** (EIB) have joined forces for the third time to boost funding for small and medium-sized enterprises, provide liquidity and help them with their investments.

Science and Culture

For the second year running, the **BBVA Foundation** and the **Spanish Royal Mathematical Society** (RSME) have presented the

Vicent Caselles Mathematical Research Awards to two young Spanish mathematicians, who will receive 2,000 euros for their innovative work.

The **BBVA Foundation Awards for Biodiversity Conservation** recognize individuals and organizations that work to protect nature and achieve relevant and measurable results with a lasting impact. At this 11th edition, the awards went to Grupo para la Rehabilitación de la Fauna Autóctona y su Hábitat (Group for the Rehabilitation of Indigenous Fauna and its Habitat) (GREFA), the Conservation Land Trust (CLT) and the communicator Carlos de Hita.

Innovation

The two entrepreneurship projects that won **BBVA Open Talent Europa 2016** have been announced: the Israeli company **Paykey** and the Dutch company **Musoni**, which will receive 30,000 euros in prize money and will participate in a two-week immersion program with BBVA executives in Madrid and Mexico City.

The Environment

Ciudad BBVA has been awarded the **LEED Gold certification**, one of the world's most demanding sustainable construction standards. It has recognized a construction that ensures 40% savings in drinking water, the reuse of gray water and rainwater for irrigation, and a reduction of over 30% in energy usage, among other benefits. BBVA Group currently has 16 buildings certified under the LEED seal in Spain, Chile, Paraguay and the United States.

The **urban mobility plan** of Ciudad BBVA has been chosen as the best practice conducted by a large Spanish company at the awards presented each year by the **Renault Foundation**, for the promotion of public transportation and a more rational use of private vehicles.

The team

BBVA and the **Integra Foundation** have signed a partnership agreement to support the employability and integration into the labor market of people living in a situation of social exclusion through a corporate volunteer project by which BBVA professionals will become voluntary trainers at the Empowerment School of the Integra Foundation.

Business areas

This section presents and analyzes the most relevant aspects of the Group's different business areas. Specifically, it shows a summary of the income statement and balance sheet, the business activity figures and the most significant ratios in each of them.

In 2016 the **reporting structure** of BBVA Group's business areas remains basically the same as in 2015:

- **Banking activity in Spain** includes, as in previous years, the Retail Network in Spain, Corporate and Business Banking (CBB), Corporate & Investment Banking (CIB), BBVA Seguros and Asset Management units in Spain. It also includes the portfolios, finance and structural interest-rate positions of the euro balance sheet.
- **Real-estate activity in Spain** covers specialist management of real-estate assets in the country (excluding buildings for own use), including: foreclosed real-estate assets from residential mortgages and developers; as well as lending to developers.
- **The United States** includes the Group's business activity in the country through the BBVA Compass group and the BBVA New York branch.
- **Turkey** includes the activity of the Garanti Group. BBVA's stake in Garanti (39.9% since the third quarter of 2015) has been incorporated into the Group's financial statements since then by the full integration method. The above has had an impact on the year-on-year rates of change in the earnings of this area due to the change in the scope of consolidation. In order to make the comparison against 2015 easier, rates of change are shown by taking into account the stake in Garanti on an equivalent basis, i.e. including the stake in Garanti as if it had been incorporated by the full integration method since January 1, 2015 (Turkey in comparable terms).
- **Mexico** includes all the banking, real-estate and insurance businesses carried out by the Group in the country.

- **South America** basically includes BBVA's banking and insurance businesses in the region.
- **The Rest of Eurasia** includes business activity in the rest of Europe and Asia, i.e. the Group's retail and wholesale businesses in the area.

In addition to the above, all the areas include a remainder made up basically of other businesses and a supplement that includes deletions and allocations not assigned to the units making up the above areas.

Lastly, the **Corporate Center** is an aggregate that contains the rest of the items that have not been allocated to the business areas, as it basically corresponds to the Group's holding function. It includes: the costs of the head offices that have a corporate function; management of structural exchange-rate positions; specific issues of equity instruments to ensure adequate management of the Group's global solvency; portfolios and their corresponding results, whose management is not linked to customer relations, such as industrial holdings; certain tax assets and liabilities; funds due to commitments with employees; goodwill and other intangibles. It also comprises the result from certain corporate operations carried out by the Group in 2015.

In addition to this geographical breakdown, **supplementary information** is provided for all the wholesale businesses carried out by BBVA, i.e. Corporate & Investment Banking (CIB), in all the geographical areas where it operates. This aggregate business is considered relevant to better understand the Group because of the characteristics of the customers served, the type of products offered and the risks assumed.

Lastly, as usual, in the case of the Americas, Turkey and CIB areas, the results of applying constant **exchange rates** are given in addition to the year-on-year variations at current exchange rates.

The **information by areas** is based on units at the lowest level and/or companies making up the Group, which are assigned to the different areas according to the geographical area in which they carry out their activity.

Once the composition of each business area has been defined, certain **management criteria** are applied, of which the following are particularly important:

- **Risk adjusted return.** Calculation of risk adjusted return per transaction, customer, product, segment, unit and/or business area is sustained on ERC, which is based on the concept of unexpected loss at a specific confidence level, depending on the Group's capital adequacy targets. The calculation of the ERC combines credit risk, market risk, structural balance-sheet risk, equity positions, operational risk, fixed-asset risk and technical risks in the case of insurance companies. These calculations are carried out using internal models that have been defined following the guidelines and requirements established under the Basel III capital accord, with economic criteria taking precedence over regulatory ones.
- **Internal transfer prices.** BBVA Group has a transfer prices system whose general principles apply in the Bank's different entities, business areas and units. Within each geographical area, internal transfer rates are established to calculate the net interest income of its businesses, under both the asset and liability headings. These rates consist of a reference rate (an index whose use is generally accepted on the market) that is applied based on the transaction's revision period or maturity, and a liquidity premium, i.e. a spread that is established based on the conditions and outlook of the financial markets. Additionally, there are agreements for the allocation of earnings between the product-generating units and the distribution units.
- **Allocation of operating expenses.** Both direct and indirect costs are allocated to the business areas, except where there is no clearly defined relationship with the businesses, i.e. when they are of a clearly corporate or institutional nature for the Group as a whole.
- **Cross-selling.** In some cases, adjustments are required to eliminate shadow accounting entries that are registered in the earnings of two or more units as a result of cross-selling incentives.

Banking activity in Spain

Highlights

- Decline in lending, strongly affected by the wholesale business and institutions.
- Good performance of the more liquid and lower-cost deposits and off-balance-sheet funds.
- Revenues impacted by the current interest-rate environment and lower activity in the markets.
- Expenses influenced by CX.
- Risk indicators continue to improve.

Macro and industry trends

The Spanish **economy** grew between 0.7% and 0.8% at quarterly rate in the second quarter of 2016, which represents a stabilization in growth at a year-on-year rate of 3.2%. Domestic demand continues to be solid. The outlook for 2017 is for a slowdown in growth, due to the lack of any improvement in foreign demand and the increase in oil prices.

The main risk indicators of the Spanish **financial system** maintain the favorable trend of recent months, according to the latest available information as of July 2016. Thus there has been a further reduction in non-performing loans (down 17.7% year-on-year) and the NPL ratio (9.4% as of 31-Jul-2016). In addition, the deleveraging process of families and companies continues. Also according to data as of July 2016, there was a 4.3% year-on-year decline in the volume of loans to the private sector, although the cumulative flow of new retail loans (to families and SMEs) between January and August 2016 has risen by 6.8% year-on-year, despite a reduction in operations with large companies. Lastly, Spanish banks have maintained a relatively stable use of the Eurosystem liquidity: €136 billion as of August 2016, 1.6% down on the figure for a year earlier. The second round of auctions for the new targeted longer-term refinancing operations (TLTRO II) were held on September 22. The total amount requested was €45.3 billion, and €11 billion has been repaid from TLTRO I. This represents an additional demand for liquidity of €34.3 billion.

Activity

Against this backdrop, gross customer **lending** reports a decline of 2.6% YTD and -3.0% in the quarter, mainly due to the wholesale businesses and institutions. The figures for new production are still positive: new mortgages between January and September grew by 11% in year-on-year terms (although repayments in this portfolio are still higher than new entries), consumer finance has grown by 43.7% and commercial loans at rates of 0.3%.

As regards **asset quality**, NPL flows have continued to decline, thanks to the good rate of recoveries and gross additions being kept in check. As a result, the NPL ratio improved over the quarter to 5.9%. The coverage ratio ends the period at 58%.

In customer **deposits** under management, time deposits continue to decline (-11.9%

against the balance at 31-Dec-2015), and the more liquid balances of current and savings accounts continue to grow (+13.2%). As a result, the total volume has reduced by 1.1% since the close of 2015.

Lastly, with regards to **off-balance-sheet customer funds** net mutual and pension funds inflows remain positive. Their balance show an increase of 0.4% since the close of 2015 (+2.5% in the last three months).

Earnings

Banking activity in Spain has generated a cumulative **net attributable profit** through September 2016 of €936m, a year-on-year decline of 5.2%. The highlights of the income statement for the first nine months of 2016 in this area are once more as follows:

- **Net interest income** still reflects the fall in the cost of customer funds and wholesale funding, although this fall does not offset the decline in the yield on loans linked to the cut in the ECB's interest rates in March 2016. In this context, there has been a year-on-year fall in cumulative net interest income through September 2016 of 2.9%.
- Sluggish market activity has led to a decline (down 6.4% year-on-year) of **income from fees and commissions**, linked mainly to funds and securities, as well as investment banking operations.
- The contribution from **NTI** in the first nine months of this year has been lower than in the same period last year (down 24.6% in the last twelve months), due mainly to lower ALCO portfolio sales and a difficult year in the markets. However, over the last twelve months the figures have been boosted by the VISA Europe deal, which generated gross capital gains of €138m in the second quarter of 2016.
- The **other income/expenses** heading is negative on a year-on-year comparison (down 13.7%) due to the booking of the annual contribution to the Single Resolution Fund (SRF) in the second quarter, which had a negative effect in the area of €117m gross. It should be taken into account that in 2015 the contribution was made in the fourth quarter.
- Moderate increase in cumulative **operating expenses** of 6.6% year-on-year greatly linked to the inclusion of CX and related integration costs.
- The continued improvement in asset quality is reflected in lower **impairment losses on financial assets** compared with the same period in 2015 (down 33.2% year-on-year). As a result, the cumulative cost of risk through September 2016 stands at 0.42%, a figure slightly down on that in June (0.43%) and far below the figure for the year 2015 (0.71%).
- **Provisions (net) and other gains/losses** have declined year-on-year by 42.3%, basically as a result of lower costs associated with the transformation process, despite the €53m allocated in the third quarter for restructuring costs.

Real-estate activity in Spain

Highlights

- The growing trend in demand, prices and activity in the mortgage market continues.
- Further progress in selective sales and in prioritizing profitability.
- The negative contribution from the area to earnings continues to decline.
- Further reduction in net exposure and NPLs.

Net exposure to real estate⁽¹⁾

(Million euros)

(1) Transparency scope according to Bank of Spain Circular 5/2011 dated November 30.

(2) Other foreclosed assets include foreclosed assets that do not stem from financing family home buying.

Industry trends

According to the latest available information from the General Council of Spanish Notaries, 39,841 **homes** were sold in July 2016, with the cumulative figure for 2016 registering year-on-year growth of 11.8%.

Although the year-on-year growth in the average **price** of the properties sold was maintained in the second quarter of 2016 (3.9%), it slowed on the figure in the first three months of 2016 (up 6.3%), according to the latest figures published by the National Institute of Statistics (INE).

The **mortgage market** is still strong, thanks to increased sales in a context of low cost of finance, as interest rates remain at record low levels. Bank of Spain figures on new residential mortgage loans show a year-on-year decline in July and August. However, this is due to the base effect, as the period of refinancing between July to September 2015 resulting from some banks ending their floor clauses led to this credit heading growing by an average year-on-year rate of 85%. Excluding this impact, residential mortgages grew by a year-on-year rate of 24.4% between January and August 2016.

The figures related to **construction activity** show the number of construction permits approved in the first seven months of the year is 36.9% up on the same period in 2015.

Activity

BBVA continues with its strategy of reducing its **net exposure** to the real-estate sector in Spain, both in the developer segment (lending to real-estate developers plus foreclosed assets derived from those loans) and in foreclosed

Coverage of real-estate exposure in Spain⁽¹⁾

(Million of euros as of 30-09-16)

	Risk amount	Provision	% Coverage over risk

Without collateral and other	231		
Real-estate exposure	22,764	11,687	51

(1) Transparency scope according to Bank of Spain Circular 5/2011 dated November 30.

real-estate assets from retail mortgage loans. As of 30-Sep-2016, the figure stood at €11,077m (in accordance with the scope of transparency stipulated by Bank of Spain Circular 5/2011 dated November 30), a fall of 10.6% since December 2015. It has declined by 2.9% with respect to the figure for June 2016.

Total real-estate exposure, including outstanding loans to developers, foreclosures and other assets, reflects a **coverage** ratio of 51% at the close of the third quarter of 2016, which represents an improvement of 1.1 percentage points with respect to the figure for 31-Dec-2015, and is practically the same as the figure for 30-Jun-2016.

Non-performing loans have fallen again over the quarter, with new additions to NPL declining over the period and a coverage ratio at 52% (NPL plus substandard).

Sales of real-estate assets in the quarter amounted to 3,189 units, and a total sale price of €230m, or 4,572 units and €381m including the sales of assets on the developer balance sheet. The above reflects an increase of 46% in number of units and 21% in sale price over the same period of 2015 (+12% in number of units and +2% in sale price including assets on the developer balance sheet). Total sales in the quarter were 26% down (40% down in the developer balance sheet alone). This quarterly decline is explained by the seasonal nature of the sales. Data includes the sales coming from CX (18 units for a sale price of €1 million). Progress continues in selective sales and in prioritizing profitability.

Earnings

This business area posted a cumulative **loss** of €315m in the first nine months of 2016, compared with a loss of €417m in the same period of 2015. The reduction is mainly a result of lower needs for loan-loss and real-estate provisions, a better scenario of the cost of funding in the asset portfolios and lower financed volumes as a result of reduced exposure.

The United States

Highlights

- Activity flat YTD with a focus on profitable growth.
- Positive performance of net interest income and a recovery in income from fees and commissions.
- More moderate increase in expenses.
- Further reduction in the cumulative cost of risk.

Macro and industry trends

According to the latest official estimates, U.S. **GDP** growth has been weak and below expectations, with the strength of consumption not offsetting the weakness of investment and net exports. According to the latest available data, these figures will improve in the third quarter of the year due to an improved labor market and moderate inflation expectations. Against this background, with growth probably remaining under 2%, caution will guide the Fed's normalization of interest rates.

In the **currencies** market, the dollar has remained fairly stable over recent months against the euro.

In the **financial system**, the overall NPL ratio for the sector continues to decline. At the close of the second quarter of 2016 it stood at 2.1%. In terms of activity, growth in lending continues to be positive, but more moderate than in previous quarters (up 4.0% in year-on-year terms with data for August 2016), supported by the rise in mortgage loans and consumer finance. Despite greater volatility in recent months, deposits continue to post positive rates of growth (up 8.8% year-on-year, also with August figures). Overall, the financial sector is in good shape, despite the low interest-rate environment and an increase in loan-loss provisions.

Activity

All the comments below on rates of change, for both activity and earnings, will be given at constant exchange rate, unless expressly stated otherwise. These rates, together with the changes at the current exchange rate, can be seen in the attached tables of financial statements and relevant business indicators.

Growth rates in gross **lending** to customers in the United States continue the moderation which began in the second half of 2015. This trend is supported by the area's selective growth in the most profitable portfolios and segments that represent more efficient capital consumption. It is also worth mentioning portfolio sales in the first half of 2016, which have been concentrated in the residential mortgage segment. New production remains high, although run-offs in the quarter are also higher. The area's lending has grown by 1.3% year-on-year, basically flat (-0.1%) YTD and declined 1.3% over the last three months. The portfolios reporting growth are: first, consumer

finance (up 8.4% year-on-year but down 1.8% since December 2015 and down 2.5% since June 2016); and second, commercial lending (up 1.1% year-on-year, flat YTD and down 1.5% since 30-June-2016).

With regard to **asset quality**, there has been a slight increase in the volume of non-performing loans against the second quarter of 2016. As a result, the NPL ratio rose to 1.7% as of 30-Sep-2016. The coverage ratio has declined on the figure recorded at the close of June to 87%. BBVA in the United States maintains a conservative and prudent policy of extending credit and collateral requirement to companies in the energy sector. Moreover, the exploration & production portfolio represents 2.9% of BBVA Compass' total portfolio and the area's exposure to the total oil & gas portfolio declined by 11% since the close of June 2016.

Finally, customer **deposits** under management reported a flat evolution (-0.1%) YTD. This means a 1.1% decline in the quarter, greatly affected by the reduction of time deposits. Current and savings accounts are up 2.8% since December 2015 and up 0.6% in the quarter while time deposits were down 9.2% and 6.8% respectively.

Earnings

The United States has generated a cumulative net attributable **profit** through September 2016 of €298m, down 24.3% on the same period last year. The most relevant aspects of the P&L of this division are summarized below:

- **Net interest income** remains positive with a cumulative rise of 6.1% over the last twelve months through September due to the firm defense of customer spreads (the cost of

deposits has remained flat, while the yield on new loan production is growing). The increased activity volumes compared with the previous year have offset the increased wholesale funding costs.

- **Income from fees and commissions** has improved steadily over the first nine months of the year. In the third quarter there was another increase of 6.6% on the previous quarter, basically due to the improvement in asset management fees, credit cards and money transfers. The cumulative change year-on-year is already positive, up 1.8%.
- **NTI** fell 18.1% year-on-year as a result of the difficult situation in the markets and lower sales of ALCO portfolios compared with those recorded in the same period in 2015.
- **Operating expenses** rose by 2.5% over the last twelve months, slightly below the year-on-year increase recorded in the first half of 2016. Personnel and other administrative expenses increased and amortization of intangible assets fell.
- Lastly, cumulative **impairment losses on financial assets** are still higher than in the same period last year, due mainly to the rise in provisions following the rating downgrades in the first quarter of 2016 of some companies that operate in the energy (exploration & production) and metals & mining (basic materials) sectors. In the second quarter, impairment losses on financial assets fell by 41.3% on the figure registered from January to March 2016. In the third quarter they fell again by 5.3% on the figure for the second quarter. As a result of the above, the cumulative cost of risk in the area has fallen again to 0.44%, from 0.49% in the first half of the year.

Turkey

Highlights

- Strong lending activity, heavily concentrated in loans in Turkish lira.
- Growth in deposits above the growth in lending.
- Solid revenue growth.
- Moderation in the rate of growth of expenses.
- Slight rise in the NPL ratio, though it is still below average for the sector.

Macro and industry trends

In Turkey, **economic growth** continues to slow. In the second quarter of 2016 growth was 3.1% in year-on-year terms, as a result of the negative impact of private consumption and net exports, which have not been offset by growing public consumption. Further slowdown is expected over the rest of the year due to the uncertainty about the situation after the failed coup attempt, which could affect economic confidence.

Inflation also fell between August and September to 7.3% in year-on-year terms as a result of waning domestic demand and of the tourism sector. In this scenario, the CBRT has continued to ease its monetary policy, reducing the upper end of the reference **interest-rate** corridor to 8.25% and implementing adequate macro-prudential measures. It is expected to maintain a prudent management of monetary policy with the aim to support the growth of domestic demand.

The Turkish **financial sector** continues to report credit growth close to double digit. With data as of September 30, 2016, the year-on-year rise in lending, adjusted for the effect of the depreciation of the Turkish lira, was 9.6% (9.0% at the close of the first half of 2016). Deposit gathering has slowed its rate growth (to around 7% year-on-year, according to the latest data against the 12.6% at 30-Jun-2016) due to a reduction of foreign currency deposits, as those denominated in Turkish lira continue to perform favorably. The NPL ratio still compares favorably with respect to the average of the banking systems in Europe, at 3.3% according to the latest available information as of September 30. As regards solvency, the sector enjoys high levels of capitalization, with a capital adequacy ratio (CAR) of 15.3% through September. Moody's recent decision to downgrade Turkey's sovereign rating is expected to bring the depreciation of the Turkish lira and an increase in wholesale funding costs.

Activity

BBVA's stake in Garanti has been 39.9% since the third quarter of 2015 and was incorporated into the Group's financial statements at that time by the full integration method. The above has had an impact on the year-on-year rates of change in the earnings, balance-sheet and activity of this area due to the change in the scope of consolidation. In order to make comparison against 2015 easier, rates of

change are shown by taking into account the stake in Garanti on an equivalent basis, i.e. including it as if it had been incorporated by the full integration method since January 1, 2015 (hereinafter "Turkey in comparable terms").

All the comments below on rates of change, for both activity and earnings, will be given at constant exchange rate, unless expressly stated otherwise. These rates, together with the changes at current exchange rate, can be seen in the attached tables of financial statements and relevant business indicators.

The area's gross **lending** to customers has increased so far this year by 8.2 % and quarterly growth of 2.2%. Garanti is continuing with its strategy focused on selective growth in the more profitable products. Loans in Turkish lira continue to be the main driver of activity, and Garanti Bank has registered a rise in the third quarter that is above that of the sector as a whole in Turkey (up 2.3% compared with 2.0% in the sector). This progress has been strongly supported, first, by the business banking loans, which is accelerating its rate of growth in the period under review. Furthermore, the positive trend in the individual customer segment continues, mainly driven by residential mortgage portfolio. However, general purpose loans (basically consumer loans) slowed their percentage increase in the third quarter (up 1.0%). Finally, loans in foreign currency in Garanti Bank continue to shrink in the last three months (down 2.0%).

With regard to **asset quality** indicators in the quarter, of note is a slight increase in the balance of NPL between June and September (up 3.3% at current exchange rate) as a result of the one-off additions to NPL from several commercial files. As a result, the area's NPL ratio stood at 2.9%, which is still under the average for the sector. The coverage ratio fell in the quarter and closed at 125% as of 30-Sep-2016.

Customer **deposits** under management have increased by 9.6% since the start of the year. The figure has remained flat (0.7%) over the quarter as a result of the use by Garanti of other alternative sources of funding, such as repos and extraordinary liquidity facilities from the CBRT. Considerable growth in demand deposits (current and savings accounts) compared with term deposits. Thus, 22% of customer deposits under management correspond to the most liquid and lower-cost items.

Lastly, of particular note is the good **capital** management carried out by Garanti, thanks to which the bank maintains strong solvency levels, among the highest in its peer group (14.7% as of 30-Sep-2016).

Earnings

Turkey generated a net attributable **profit** of €464m in the first nine months of 2016, up 45.7% on the figure registered in the same period in 2015, mainly with strong support of the positive performance of revenues:

- Continued good performance of **net interest income**, which is up 8.9 % in year-on-year terms. This heading has improved its behavior in the third quarter due to the cheaper cost of finance as a result of the relaxation of monetary policy by the CBRT in order to support liquidity. Thus the improved customer spreads are mainly a result of the reduced cost of deposits (the yield on loans also rises, but to a lesser extent).
- Rising trend in **income from fees and commissions** maintained (up 15.6 % year-on-year), thanks to a good diversification, some improvements implemented in 2016, and downward reassessment of the provision created for the miles paid to Turkish Airlines stemming from the lower oil price. This more than offsets any adverse effects on this heading, such as from the temporary suspension of account maintenance and administration fees imposed by the Turkish Council of State in January 2016. Positive contribution of **NTI**, due to the good performance of the Global Markets unit, the capital gains derived from the sales of the ALCO portfolio, and the booking of the VISA operation in the second quarter.
- Cost discipline implemented explains a new decline in the year-on-year rate of growth in **operating expenses** accumulated through September 2016 (+6.5%). Despite this, the heading continues to be affected by the impact of the depreciation of the Turkish lira on the cost headings denominated in foreign currency, the investments being made in the upgrading, modernization and digitalization of traditional channels and the 30% increase in the minimum wage since January 2016. As a result, the **efficiency ratio** as of 30-Sep-2016 continues to improve: at 39.1%; it is down 8.5 percentage points on that of the same period in 2015.
- Lastly, at 20.3% the year-on-year growth in **impairment losses on financial assets** continues to be influenced by the negative impact of the depreciation of the Turkish lira, increased provisions affecting the subsidiary in Romania, and one-off NPL additions from several commercial files. The above puts the cumulative cost of risk through September 2016 at 1.05%.

Mexico

Highlights

- Negative impact of exchange rate.
- Activity continues strong.
- Operating expenses are still growing below gross income.
- Double-digit year-on-year growth in net attributable profit.
- Further improvement in risk indicators.

Macro and industry trends

Mexico's **GDP** declined in the second quarter of 2016 in quarterly terms (down 0.2%) due to the weakness of the service sector, combined with industrial stagnation over recent quarters. This figure suggests an average year-on-year rise of under 2% for 2016.

The Mexican Central Bank (Banxico) once more hiked reference **interest rates** by 50 basis points to 4.75% at its meeting in September, reacting to the depreciation of the **Mexican peso**. The peso is being affected by factors that include the current-account deficit, risks around oil prices and the uncertainty associated with the U.S. presidential elections. The currency's exchange rate against the euro closed in September 12.7% down on the figure twelve months earlier and 5.1% down on 30-Jun-2016.

Mexico's **financial system** maintains high solvency levels (a capital adequacy ratio of 14.8% according to local data from July 2016). The NPL ratio stands at 2.4%, according to the public information available from the National Securities Banking Commission (CNBV) at the close of August. In terms of activity, trends are similar to previous quarters: the balance of the loans granted by commercial banks registered a nominal year-on-year growth of 14.2%, thanks to a good performance across all the segments, particularly corporate lending and consumer finance. Mortgage lending has increased by 11.3% over the last year, boosted by the middle-income and residential segments. Customer fund gathering has also performed positively, in both demand and time deposits.

Activity

All the comments below on rates of change, for both activity and earnings, will be given at constant exchange rate, unless expressly stated otherwise. These rates, together with the changes at current exchange rate, can be seen in the attached tables of financial statements and relevant business indicators.

According to data at the close of the third quarter of 2016, BBVA in Mexico performed well in **lending**, which increased by 8.7% since December 2015 and 1.7% over the quarter. There are signs that the rises in the wholesale and retail portfolios are converging, meaning an improvement in the growth rate of the retail portfolio compared with previous periods. As a result of this trend, BBVA Bancomer

has maintained its position as market leader, with gains of 28 basis points so far this year in market share (according to local information from the CNBV for the close of August 2016).

The **wholesale portfolio** has increased by 8.8% since December 2015 and 0.9% since June 2016. Worth highlighting are business loans, including loans to corporate clients and mid-sized companies, which are up 11.5% YTD (+1.3% over the quarter). Lending to housing developers has been positive for the fifth quarter in a row, with a rise of 20.2% on the figure for the close of 2015 (up 8.4% over the quarter).

The **retail portfolio** grew by 8.7% since the close of 2015 and 3.0% over the quarter. It continues to be buoyed by consumer finance and loans to SMEs, which increased by 15.6% and 17.8% respectively YTD. In consumer finance payroll loans and pre-approved loans are still rising. The trend in credit cards has been positive, as the negative impact of the cancellation of the card management agreement with Wal-Mart is wearing off. As a result, credit cards have grown at a rate of 2.2% in the first nine months of 2016. Of note are the good data in credit card new production, which using cumulative figures through Sep-30-2016 is up by 17.5%. Finally, residential mortgage new production has also performed well (up 12.5% year-on-year), although due to the maturity of this portfolio it registered more limited growth than other retail segments, at 4.3% since the close of 2015.

This positive trend in lending has been accompanied by sound **asset quality**. The NPL and coverage ratios have continued to improve over the year and closed September at 2.5% (down 2 basis points over 30-Jun-2016) and 122% respectively.

Total customer **funds** (customer deposits under management, mutual funds, pension funds and other off-balance-sheet funds) grew 7.9% YTD (up 1.4% over the quarter). All products have continued to perform positively: current and savings accounts are up 5.9% since 31-Dec-2015 and time deposits are up 20.6%. Thanks to this trend, BBVA in Mexico can maintain a profitable funding mix in which the lower-cost items account for 80% of

total customer deposits under management. Off-balance-sheet customer funds are up 6.7% (up 1.6% over the quarter).

Earnings

BBVA in Mexico posted a cumulative **net attributable profit** through September 2016 of €1,441m, with a year-on-year rate of growth of 11.4%. The highlights of the income statement for the first nine months of 2016 in this area are given below:

- Rise of 11.8% in **net interest income**, boosted mainly by higher volumes of activity.
- Good performance of **income from fees and commissions**, with growth of 11.4%, largely due to a greater volume of transactions with credit card customers and fees from online banking.
- Fall in **NTI** (down 1.3%), which has been affected by the difficult situation of the markets impacting the revenue of the Global Markets unit.
- The **other income/expenses** heading was also down by 11.4% due to an increased contribution to the deposit guarantee fund (proportional to the volume of liabilities in the area), which has not been offset by revenue generated by the insurance business.
- Increase in **operating expenses** (up 7.9%) below the growth rate of gross income (up 10.6%). As a result, the **efficiency ratio** has improved as a cumulative figure through September to 36.2%. It should also be noted that this ratio continues to compare favorably with the average for the sector (56.4% according to local information from the CNBV at the close of August 2016).
- Lastly, a year-on-year rise of 11.8% in **impairment losses on financial assets**. As a result, the cumulative cost of risk at the close of September 2016 stands at 3.35%.

South America

Highlights

- Activity continues strong in the region.
- High capacity to generate recurring revenues and favorable trend in NTI.
- Costs influenced by high inflation in some countries and the adverse effect of exchange rates.
- Slight worsening of risk indicators, strongly affected by the moderation in the environment.

Macro and industry trends

The slowdown in **economic activity** in South America at the start of 2016 is beginning to show signs of ending in the last quarter of the year. GDP growth during the first half of the year fell 1.5% year-on-year in the five main countries in which BBVA is present. However, it is expected to come back to positive rates in 2017 boosted by a recovery in the external sector (following the depreciation of exchange rates in 2015 and leveraged on a steady recovery in commodity prices). In addition, in countries such as Argentina, Peru and Colombia, public and private investment will contribute to this progress. There are still significant differences between countries, with growth above region average of Andean ones.

Inflation rates have begun to converge toward the central bank targets, after being pushed up in 2015 by the depreciation in exchange rates. Thus the central banks of economies with inflation targets will probably maintain **interest rates** unchanged in the future or with some downside bias in certain cases. **Currency** rates in the region will continue to depreciate, particularly when the process of monetary normalization resumes in the United States.

The **financial sector** remains sound, with acceptable levels of capitalization, good profitability and NPL ratios in check. In terms of activity, there has been a robust increase in lending, while deposits continue to perform strongly.

Activity

Unless expressly stated otherwise, all the comments below on rates of change, for both activity and earnings, are expressed at constant exchange rates. These rates, together with the changes at current exchange rates, can be seen in the attached tables of financial statements and relevant business indicators.

Gross **lending** to customers continues to perform well, at a growth rate so far this year of 4.3%. Of note is the positive trend in Argentina (up 24.7%), Colombia (up 5.6%) and Chile (up 2.3%). Segments performing particularly well are credit cards (up 10.0%), followed by residential mortgages (up 6.4%) and consumer finance (up 6.1%).

In terms of **asset quality**, slight worsening in the NPL and coverage ratios, closing

September at 2.8% and 110%, respectively, strongly influenced by the moderation of the environment.

On-balance-sheet and off-balance-sheet customer funds continue to grow at a good rate (up 9.1% since December 2015), with a positive contribution from all products and geographical areas. By product, the best performance was in time deposits (up 16.4%). By country, there was significant growth in Argentina (up 29.5%), Colombia (up 12.8%) and Chile (up 3.2%).

Earnings

South America generated a net attributable profit of €576m in the first nine months of the year, a year-on-year increase of 2.2%. The most relevant aspects of the income statement in this area are:

- Growth in **gross income** of 12.7%, thanks to the high capacity to generate revenues in the area, boosted by increased activity. Net interest income is up 12.8% and fees and commissions have grown by 10.5%. NTI also had excellent performance in year-on-year terms (up 54.8%), influenced by

the lifting of the “exchange clamp” in Argentina and the sale of holdings in Colombia.

- **Operating expenses** have increased year-on-year by 18.7%, largely due to inflation in some countries in the region and the changes in the exchange rates against the dollar, which have had a negative impact on items denominated in the U.S. currency.
- **Impairment losses on financial assets** barely increased by 0.6% in the last twelve months, which puts the cumulative cost of risk as of 30-Sep-2016 at 1.13%.

By country, **Argentina** has performed well in all its margins thanks to strong activity, thus offsetting the increase in expenses linked to inflation. **Chile** has been affected by higher loan-loss provisions. In **Colombia**, the positive performance of gross income has been boosted by good income from fees and commissions and NTI, and good figures from impairment losses on financial assets. In **Peru**, gross income has been affected by lower NTI, which has not been offset by the growth in net interest income and income from fees and commissions, both of them growing in line with activity.

Rest of Eurasia

Highlights

- The downward path in the area's loan book continues.
- Further growth in deposits in the quarter in both Asia and Europe.
- Another year-on-year increase in the area's net attributable profit thanks to the positive trend in revenues and moderation in expenses.
- Slight upward trend of asset quality indicators.

Macro and industry trends

The **Eurozone** slowed its rate of growth in the second quarter of 2016 to a quarterly 0.3%. Growth for the year as a whole will finally depend on the level of recovery in the second half of 2016 in what is an uncertain environment, given the result of the Brexit referendum in favor of Britain leaving the EU and global geopolitical risks. Against this backdrop, the role of the ECB's stimulus programs continues to be key for guaranteeing lax monetary conditions that contribute to achieve the price stability target and ensure economic recovery.

Activity and earnings

The downward path in the area's **loan book** continues. As of September 2016 it registered a decline of 8.0% against December 2015 and a decrease of 11% against June 2016, mainly influenced by the reduction shown by the global lending business in Europe and Asia.

The area's main **credit risk indicators** show a slight upward trend in the quarter: the NPL ratio closed at 2.8% at the end of September and the coverage ratio at 94%.

Customer **deposits** under management grew 5.7% in the last three months, slowing the rate of decline since the close of 2015 compared with the first half of 2016 to 5.6%. By geographic areas, there was significant growth in Asia, above all in the global transactional business, with a very positive trend in its growth (up 45.0% in the quarter); and a reduction in European branches (down 16.1% since December 2015, but growth of 1.3% in the quarter).

As regards **earnings**, gross income in the quarter fell 48.0% with respect to the figure for the previous quarter, mainly due to two

factors: worse results from the Global Markets unit when compared with a previous very positive quarter that included the receipt of the CNCB dividend; and the adverse impact of the current macroeconomic situation, with a combination of very low interest rates leading to a narrowing of spreads, and fewer transactions by the wholesale businesses. In cumulative terms, the area has posted year-on-year growth in gross income of

2.7%, largely due to the receipt of the CNCB dividend, which was not booked the previous year. Operating expenses continue to moderate, with a cumulative figure through September down year-on-year to 0.7%. Impairment losses on financial assets also moderated. Considering all the above, the area generated a net attributable profit between January and September of €101m, 53.0% more than in the same period in 2015.

Shareholder's funds	50,784	3.0	49,315
Economic capital allocated	(27,317)	1.9	(26,814)

The Corporate Center's cumulative income statement through September 2016 is influenced mainly by:

- Greater contribution from **NTI** compared with the same period in 2015, mainly as a result of the capital gains registered in the third quarter from the sale of 0.75% of BBVA Group's stake in CNCB.
- Moderation of the year-on-year increase in **operating expenses** to 1.3% (up 1.4% year-on-year in the first half of the year).
- 14.0% increase in provisions (net) and other gains (losses), basically due to the €41m provision made in the third quarter for restructuring costs.
- Lack of **corporate operations**. Results from corporate operations for the first nine months of 2015, a loss of €1,113m, basically included €705m in capital gains after tax from the various sale operations equivalent to 6.34% of BBVA Group's stake in CNCB (€583m in the first quarter from the sale of 5.6% and €122m in the second quarter from the sale of 0.8%), €22m from the badwill generated by the CX deal (second quarter), -€1,840m from the valuation at fair value of the initial 25.01% stake held by BBVA in Garanti (third quarter) and the impact from the sale of 29.68% stake in CIFH (third quarter).

The Corporate Center posted a negative cumulative **result** of €704m, which compares with a loss of €1,793m in the same period of 2015 (-€680m excluding corporate operations).

Annex

Other information: Corporate & Investment Banking

Highlights

- The environment still one of pressure on margins and excess liquidity.
- Slowdown in lending growth and decline in customer deposits under management.
- Further improvement in third-quarter results, although earnings are down in year-on-year terms due to increased loan-loss provisions.
- Stability of the asset quality indicators.

Macro and industry trends

The **markets** have begun to put a price on the environment of slightly stricter monetary policies. The interest rates on risk-free debt have picked up from all-time lows and the stock markets have reacted with a downturn. However, this process is not expected to lead to a significant correction of the bond market, because monetary policies will try to maintain interest rates anchored at relatively low levels. In the short term, the elections in the United States are the main source of uncertainty, so there could be an increase in volatility and an environment of significant correction of asset prices. It is also important to keep an eye on the negotiations for Britain's exit from the EU, now that the British Prime Minister has given the end of February as the possible date for triggering article 50 of the Treaty of the European Union. This factor has already begun to increase market volatility.

Activity

All the comments below on rates of change, for both activity and earnings, will be given at constant exchange rates, unless expressly stated otherwise. These rates, together with the changes at current exchange rates, can be seen in the attached tables of financial statements and relevant business indicators.

The main aspects of the Group's wholesale business activity are:

- The context of continued higher pressure on margins (negative interest rates in Europe) and excess liquidity is maintained. In this situation, gross **lending** to customers in CIB has slowed its growth and closed the month of September at similar levels to the close of 2015. There was a significantly good performance in Mexico (up 16.1%), contrasting with the declines in Spain (down 0.7%), rest of Europe and Asia (down 9.6%), the United States (down 2.9%) and South America (down 4.0%).
- Improvement in the **asset quality** indicators over the quarter. As of 30-Sep-2016, the NPL and coverage ratios closed at 1.4% and 83%, respectively (1.3% and 80% as of 30-Jun-2016).
- Decline in customer **deposits** under management, which as of 30-Sep-2016 stood 12.6% below the December 2015 figure. By geographical areas, there was a fall in Spain (down 16.4%), rest of Europe

and Asia (down 6.9%), the United States (down 34.7%) and South America (down 10.9%), as against the growth registered in Mexico (up 8.8%).

Earnings

CIB posted a cumulative net attributable **profit** at the close of the third quarter of 2016 of €561m, of which €117m were in the first quarter of the year, €208m in the second and €236m in the third. The result of the third quarter therefore demonstrates strong resilience, as it is 13.5% above the figure for the second quarter. In cumulative terms, this figure is 31% down on the figure for the same period last year, affected strongly by higher loan-loss provisions. The highlights of this income statement are summarized below:

- **Gross income** in the third quarter is down 5.1% on the figure between April and June 2016, which was positively influenced by the volatility of the market as a result of "Brexit". The Global Markets unit reduced its quarterly contribution to gross income on the previous quarter (down 21.8%), conditioned by this effect and the lower number of transactions as a result of the summer season, mainly affecting Europe. Similarly, the Corporate Finance unit has been affected by the lower number of transactions completed. The effects of "Brexit" have led in the first part of the quarter to lower activity in the European primary market. In addition, the seasonal factor mentioned above has also affected the unit. Although September began with some stability there were signs of the limited depth in the primary market, and investor demands have shown themselves to be very price sensitive. In Mergers & Acquisitions, activity continues at record levels, with a very significant pipeline derived from interest in countries such as Spain and Mexico. The most significant

transactions closed in the quarter have been the sale of Urbaser by the ACS group (once more, Asian buyers interested in investing in know-how in Spain) and of sugar factories in Mexico.

In year-on-year terms, the cumulative gross income of this heading fell by 5.9%. These figures are explained by situation of uncertainty and low market activity, with little new production in the purely banking business and lack of one-off transactions, particularly in Europe.

The Deep Blue plan was implemented to address this market reality. Since its launch, the results have been very positive. This cross-cutting initiative is designed to involve several CIB teams in visits to clients to offer them the solutions that best fit their needs. Underwriting instructions worth €30,000m have been submitted as a result of this plan, which are being monitored on a recurrent basis.

- The performance of cumulative **operating expenses** improves on that reported in the first semester of 2016. This heading increased 4.3% with respect to the same period in 2015, strongly influenced by the growth in technology costs associated with the investment plan. However, there has been a notable restriction in personnel expenses.
- Finally, quarterly **impairment losses on financial assets** are below the previous quarter and consequently show a reduction in the rate of growth of the cumulative figure through September 2016. As commented in previous quarters, growth in this heading is mainly due to the rating downgrades (above all in the first quarter of 2016) of some companies in the United States operating in the energy (exploration & production) and the metals & mining (basic materials) sectors.

Conciliation of the BBVA Group's financial statements

Presented below is the reconciliation between the consolidated income statement and the management income statement, which is shown throughout this management report for the first nine months of 2015. The main difference between both is the method used for integrating Garanti's earnings. In the management income statement, the Group's earnings were presented by consolidating Garanti in the proportion corresponding to the percentage held by BBVA Group in the Turkish bank until the third quarter of 2015 (25.01%), versus the integration using the equity method in the

consolidated income statement. The "earnings from corporate operations" heading in the management income statement for the first nine months of 2015 includes the capital gains from the various sale operations equivalent to 6.34% of BBVA Group's stake in CNCB, the badwill generated by the CX operation, the effect of the valuation at fair value of the initial 25.01% stake in Garanti and the impact from the sale of 29.68% stake in CIFH. In the consolidated income statement, these earnings are included under net operating income.
