The main variations of the period in terms of capital composition and capital ratio are as follows:

- The issuance of contingent convertible securities eligible as Additional Tier I for an amount of €1,500 million, has contributed to increase the capital ratio by 43 basis points.
- The sale of 5.6% stakes in China Citic Bank (CNCB) has resulted in an increase of the capital ratio by 35 basis points.
- The organic growth achieved during the first quarter 2015 has increased the capital ratio by 10 basis points (+25 basis points due to the revenue generation -net of dividends and excluding the above mentioned sale of CNCB-; and -15 basis points due to the organic growth of RWA).
- The effect of transitional adjustments (phase in) as established by the current regulation has resulted in a decrease by 5 basis points of the capital ratio.

(1) CR: Capital requirements

The decline of RWA by €3.7 billion from December 2014 is due to movements of different nature:

- On the one hand, the organic growth (mainly in South America, Mexico and the U.S.A.), the impact of currency exchange rates (excluding Venezuela) and the elimination of the “regulatory equivalence” in Turkey, Colombia and Peru, has resulted in an increase of the RWA.
- On the other hand, the above mentioned increase has been widely compensated by the drop in RWA due to the sale of CNCB and the conversion of Venezuela figures to the new exchange mechanism called SIMADI.

## Leverage ratio

<u>Leverage ratio</u>	March 2015	December 2014	Variation
Tier 1 capital (T1 = CET1 + AT1)	43.995	41.832	2.163

<b>Leverage ratio (avg of the monthly leverage ratios over the quarter)</b>	<b>6,53%</b>		

The variation of the period is, mainly, due to the increase of TIER 1 aforementioned.
