1. Introduction

1.1 Executive Summary1.2 Regulatory environment

The quantitative information presented as of the date of this document corresponds to provisional data, subject to approval of the interim consolidated Financial Statements and the statements sent to the Regulator, as the case may be.

1.1 Executive summary

BBVA ended the **first half of 2015** with comfortable capital levels, clearly above the minimum levels required, and had a leverage ratio (fully-loaded) that continues to compare very favorably with its peer group.

Pursuant to solvency regulations, below is the prudential information as of June 30, 2015, in accordance with the European Banking Authority's "*Guidelines on materiality, proprietary and confidentiality and on disclosure frequency under Articles* 432(1), 432(2) and 433 of *Regulation (EU) No.* 575/2013" published in December 2014, which specifies the prudential information to be reported with a frequency of less than one year.

1.2 Regulatory environment

In the European Union, the Basel III framework was implemented through a Common Regulation, "*Regulation (EU) No. 575/2013 on prudential requirements for credit institutions and investment firms*" (CRR) and put into effect by "*Directive 2013/36/EU on Access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms*" (CRR), dated June 27, 2013. The Directive requires adaptation, while the Regulation applies directly.

Transposition to national law began on November 29, 2013 with the publication of Royal Decree-Law 14/2013 adapting Spanish law to European Union law with respect to the supervision and solvency of financial institutions. It has continued with the approval of the Law on the regulation, supervision and solvency of financial institutions, dated June 26, 2014

The new regulations require institutions to have a higher and better quality capital level, increase capital deductions and review the requirements associated with certain assets. Unlike the previous framework, the minimum capital requirements are complemented with requirements for capital buffers and others relating to liquidity and leverage.

The gradual adaptation schedule detailed below has been established for compliance with the new capital ratios:

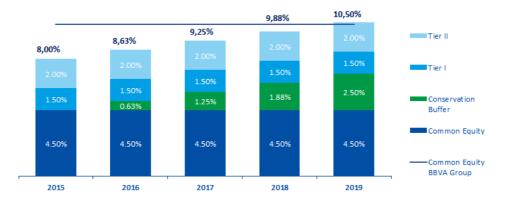

CHART 1: Schedule for gradual adaptation to CRR

Under the requirements set out by CRR, the required CET1 ratio is 6% in 2015 and 7% in 2019. These requirements may be increased by the counter-cyclical capital buffer requirement, the systemic bank capital buffer requirement and the systemic risk buffer requirement, should they apply and be in force (mainly starting in 2016).

The capital requirement for systemic banks is established based on the bank's systemicity, which is determined based on a number of variables that include: the bank's size, interconnection with the financial system, substitutability of the services it offers, complexity and cross-border activity. This buffer for systemic risk aims to prevent and mitigate possible effects associated with risks in the system that are not cyclical, as well as macroprudential risks, when the materialization of such risks may have a negative impact on the financial system itself or on the real economy.

BBVA Group is currently considered a global systemic entity according to the list prepared by the Financial Stability Board (FSB). Of the 5 possible tranches, with requirements ranging from 1% to 3.5%, BBVA Group is in the first tranche, with an additional requirement as a global systemic bank of 1%, applicable gradually from 2016, and 25% a year until 2019, in accordance with article 162 of Directive 2013/36/EU.

However, as of the data of this report, none of these additional capital requirements applied and the capital conservation requirement, the anticyclical capital requirement and the systemic risk requirement were 0%.

In addition, the Basel Committee is reviewing the Pillar III framework and this review is expected to completed in December 2015. The main purpose of the review process is to improve the comparability and consistency of information, as well as its disclosure frequency, and greater use of templates has been proposed.

In this regard, in 2015, the Basel Committee on Banking Supervision (BCBS) has continued to publish consultation and final documents to facilitate the understanding and application of the requirements set out by Basel III.

In addition, the European Banking Authority (EBA) has continued to issue technical standards and guidelines to ensure the harmonized implementation in the European Union of the minimum capital requirements, for both Pillar I and Pillar II.

The binding technical standards (BTS) are legal acts that develop certain aspects of the CRD IV/CRR to ensure harmonization in certain areas. These BTS must be approved by the European Commission in order to be binding and directly applicable in all Member States. These standards will therefore become part of the national legislation of the Member States when they come into effect, and their transposition to national law is not necessary.

The technical guidelines are important tools for harmonized application of the regulation's criteria, methodologies and procedures. Although these guidelines are not legally approved by the European Commission, the competent authorities must adopt them so they apply at local level. The competent authorities are required to inform the EBA of the adoption or intention to adopt the guidelines and, if they are not adopted, the reasons need to be explained.

2. Company name and differences in the consolidable group for the purposes of solvency and accounting regulations

- 2.1 Company name and scope of application
- **2.2** Differences in the consolidable group for the purposes of solvency and accounting regulations
- **2.3** Reconciliation of the Public Balance Sheet from the accounting perimeter to the regulatory perimeter

2.1. Corporate name and scope of application

Banco Bilbao Vizcaya Argentaria, S.A. (hereinafter, "the Bank" or "BBVA") is a private-law entity subject to the rules and regulations governing banking institutions operating in Spain.

The Bylaws and other public information about the Bank are available for consultation at its registered address (Plaza San Nicolás, 4 Bilbao) and on its official website: www.bbva.com.

The Solvency Regulations are applicable at the consolidated level for the entire Group.

The Group's consolidated financial statements are drawn up as set out in the International Financial Reporting Standards adopted by the European Union (hereinafter, "EU-IFRS").

2.2. Differences in the consolidable group for the purposes of solvency and accounting regulations

For the purposes of the accounting regulations, companies are considered to form part of a consolidated group when the controlling institution holds or can hold, directly or indirectly, control of them. An institution is understood to control another entity when it is exposed, or is entitled to variable returns as a result of its involvement in the subsidiary and has the capacity to influence those returns through the power it exercises on the subsidiary. For such control to exist, the following aspects must be fulfilled:

 Power: An investor has power over a subsidiary when it has current rights that provide it with the capacity to direct its relevant activities, i.e. those that significantly affect the returns of the subsidiary;

- b) Returns: An investor is exposed, or is entitled to variable returns as a result of its involvement in the subsidiary when the returns obtained by the investor for such involvement may vary based on the economic performance of the subsidiary. Investor returns may be positive only, negative only or both positive and negative.
- c) Relationship between power and returns: An investor has control over a subsidiary when it not only has power over the subsidiary and is exposed, or is entitled to variable returns for its involvement in the subsidiary, but also has the capacity to use its power to influence the returns it obtains due to its involvement in the subsidiary.

Therefore, in drawing up the Group's interim consolidated Financial Statements, all dependent companies and consolidated structured entities have been consolidated by applying the full consolidation method.

Jointly-controlled entities, as well as joint ventures (those over which joint control arrangements are in place), are valued using the equity method.

The list of all the companies forming part of the BBVA Group is included in the annexes to the Group's interim consolidated Financial Statements.

For the purposes of the solvency regulations, as set out in Chapter II of the CRR, the consolidated group comprises the following subsidiaries:

- Credit institutions.
- Investment services companies.
- Open-end funds.
- Companies managing mutual funds, together with companies managing pension funds, whose sole purpose is the administration and management of those funds.
- Companies managing mortgage securitization funds and asset securitization funds.
- Venture capital companies and venture capital fund managers.
- Institutions whose main activity is holding shares or investments, unless they are mixed-portfolio financial corporations supervised at the financial conglomerate level.

Likewise, the special-purpose entities whose main activity implies a prolongation of the business of any of the institutions included in the consolidation, or includes the rendering of back-office services to these, will also form part of the consolidated group.

However, according to the provisions of this law, insurance entities and some service firms do not form part of consolidated groups of credit institutions.

Therefore, for the purposes of calculating solvency requirements, and hence in the drawing up of this Information of Prudential Relevance, the perimeter of consolidated institutions differs from the perimeter defined for the purposes of drawing up the Group's Financial Statements. The effect of the difference between the two regulations is basically due to:

- The difference between the balance contributed by institutions that are consolidated at the accounting level but not for Solvency purposes. This balance corresponds mainly to real-estate, insurance and service companies, including BBVA Seguros and Sociedad de Pensiones Bancomer. Details of these companies can be found in Annexes I and II to this document.
- The entry of the balance from institutions that are not consolidated at the accounting level but are consolidated for purposes of solvency. This balance corresponds mainly to the institutions of the Turkish Group, Garanti. Details of these companies can be found in Annex IV to this document.

2.3. Reconciliation of the Public Balance Sheet from the accounting perimeter to the regulatory perimeter

This section includes an exercise in transparency aimed at offering a clear view of the process of reconciliation between the book balances reported in the public balance sheet (attached to the Group's interim consolidated Financial Statements) and the book balances used in this report (regulatory scope).

TABLE 1. Reconciliation of the Public Balance Sheet from the accounting perimeter to the regulatory perimeter

3. Information on total eligible capital

- **3.1 Characteristics of the eligible capital resources**
- **3.2** Details of total eligible capital
- 3.3 Variations in the period in terms of total eligible capital

3.1. Characteristics of the eligible capital resources

Considered for the purpose of calculating the minimum capital requirements, under the solvency regulations, are the elements and instruments corresponding to Tier 1 capital, which is defined as the sum of ordinary Tier 1 capital (CET1) and additional Tier 1 capital (AT1) as defined in Part Two, Chapters I to III of the CRR, as well as their corresponding deductions, in accordance with articles 36 and 56, respectively.

Also considered are the elements of Tier 2 capital defined in Part Two of Chapter IV, section I of the CRR. In addition, it considers the deductions to be those defined as such in section II of the same Chapter.

In line with the stipulations of the solvency regulation, capital essentially comprises the following elements:

- a) Capital and share premium: this includes the elements described in article 26 section 1, articles 27, 28 and 29 of the CRR and the EBA list referred to in article 26 section 3 of the CRR.
- b) Accumulated gains: In accordance with article 26, section 1, letter c), the gains that may be used immediately and with no restriction to cover any risks or losses are included.
- c) Other accumulated income and other reserves: The reserves of consolidated companies (including the associated exchange-rate differences), the valuation adjustments associated with the available-for-sale portfolio (excluding the sovereign portfolio) and the balance of the equity account that contains remunerations based on capital instruments will be classified mainly under this heading.
- d) Minority interests: The holdings representing minority interests, and corresponding to those ordinary shares in the companies belonging to the consolidated group that are fully paid up, are included, excluding the part which is included in revaluation reserves and in valuation adjustments. Earnings net of dividends attributable to these holdings are also included, as set out in article 84 of the CRR.
- e) Net income for the year: the net income referring to the perimeter of credit institutions, deducting the amount corresponding to interim and final dividend payments, is included, as set out in article 26, section 2 of the CRR.

Capital is, moreover, adjusted mainly through the following deductions:

- f) Additional value adjustments: The adjustments originated by the prudent valuation of the positions at fair value are included, as set out in article 105 of the CRR.
- g) Intangible assets: these are included net of the corresponding liabilities for taxes, as set out in article 36, section 1, letter b) and article 37 of the CRR.
- h) Loss carry-forwards (LCFs): these are assets for deferred taxes that depend on future returns, excluding those deriving from temporary differences (net of the corresponding liabilities for taxes when the conditions established in article 38, section 3 of the CRR are met), as per article 36, section 1, letter c) and article 38 of the CRR.
- i) Expected losses in equity: the losses arising from the calculation of risk-weighted exposures through the method based on internal ratings are included, as set out in article 36, section 1, letter d) of the CRR.
- j) Profit or losses for liabilities valued at fair value: those derived from changes in asset quality, in accordance with article 33, letter b) of the CRR.
- k) Direct and indirect holdings of own instruments: the shares and other securities booked as own funds that are held by any of the Group's consolidated institutions are considered, together with those held by non-consolidated institutions belonging to the economic group, as set out in article 33, section 1, letter f) and article 42 of the CRR.
- Securitizations: securitizations that receive a risk weighting of 1.250% are included, as set out in article 36, section 1, letter k), subsection ii) of the CRR.
- m) Temporary adjustments of ordinary Tier 1 capital: this includes unrealized profit and losses valued at fair value, as set out in article 467 and 468 of the CRR.
- n) Qualifying deductions of ordinary Tier 1 capital: this includes the deductions that exceed the additional Tier 1 capital, as described in article 36, section 1, letter b) of the CRR.

The application of some of the above deductions (mainly intangible assets and LCFs) shall be carried out gradually over a transition period of 5 years in general (phased in), as set out in the current regulation.

In addition, the Group includes as total eligible capital the additional Tier 1 capital instruments defined in articles 51 and 484 of the CRR, including the corresponding adjustments, in accordance with article 472 of the CRR:

- o) Equity instruments: This heading includes the contingent convertible issues (CoCos) that meet the conditions set out in article 52, section 1 of the CRR.
- p) Elements referred to in article 484, section 4 of the CRR: This section includes the preferred securities issued by the Group.
- q) Temporary adjustments of additional Tier 1 capital: This includes the adjustments considered in article 472 of the CRR as measures established for gradual adoption of the new capital ratios.

Lastly, the entity also includes additional capital as total eligible capital. This is largely made up of the following elements:

- r) Subordinated debt received by the Group: understood as that which, for credit seniority purposes, comes behind all the common creditors. The issues, moreover, have to fulfill a number of conditions which are laid out in article 63 of the CRR.
- s) Instruments and elements issued or considered acceptable as capital before December 31, 2011: Tier 2 capital includes the subordinated debt received by the Group that does not meet the conditions set out in article 63 of the CRR, but is acceptable in the transitional regulatory capital under article 484 of the CRR.
- t) Qualifying capital instruments included in the consolidated Tier 2 capital, issued by affiliates and held by third parties: these instruments are included as set out in articles 87 and 88 of the CRR.
- u) Surplus resulting between value adjustments for asset impairment plus allowances for losses calculated as per the IRB method on the losses they are expected to incur: the aforementioned surplus includes the part that is below 0.6% of the risk-weighted exposures calculated according to the IRB method.

It will also include the book balances of generic allowances referring to securitized exposures which have been excluded from the risk-weighted exposure calculation under the IRB method, for the part not exceeding 0.6% of the risk-weighted exposures that would have corresponded to these securitized exposures, had they not been excluded. There is no treatment defined for the surplus of allowances over expected loss in portfolios assessed under the IRB approach above the 0.6% limit.

The book balance for generic allowances for losses reached in keeping with the accounting regulations and which corresponds to those portfolios to which the standardized approach is applied, for an amount up to 1.25% of the weighted risks that have been the basis for the coverage calculation, is also considered as eligible additional capital.

Generic allowances for losses for those securitized assets that have been excluded from the risk-weighted exposures under the standardized approach are also eligible up to a limit of 1.25% of the weighted risks that would have corresponded to them, had they not been excluded. The surplus over the 1.25% limit is deducted from exposure.

3.2. Details of total eligible capital

The table below shows the amount of total eligible capital, net of deductions, for the different items making up the capital base as of June 30, 2015 and December 31, 2014, in accordance with the disclosure requirements for information relating to temporary capital set out by Implementing Regulation (EU) No. 1423/2013 of the Commission dated December 20, 2013:

TABLE 2. Details of total eligible capital

Annex V to this document shows the features of the main capital instruments with the aim of reflecting, with the level of detail required by regulations, the characteristics of an entity's capital instruments, in accordance with Implementing Regulation (EU) No. 1423/2013 of the Commission dated December 20, 2013.

3.3 Variations in the period in terms of total eligible capital

The variations in the first half of 2015 in the amounts of Tier 1 capital in the above table are basically due to the cumulative earnings to June net of dividends and the new issue of perpetual contingent convertibles for €1,500 million.

The general appreciation of most of the currencies is offset by the lower equity in Venezuela, due to the depreciation of the exchange rate as a result of the application of the new SIMADI exchange system.

In addition, there is a negative effect in minority shareholdings and deductions, due to the impact of the phasing calendar, of 40% in 2015, compared with 20% in 2014.

The variations in the elements referred to in section p) of the above table are due to the amortization of issues of preferred securities by BBVA International Preferred, S.A.U., as described in section 21.4. of BBVA Group's interim Financial Statements.

In Tier 2 capital the increase is due mainly to the issues of subordinated debt by BBVA Compass and BBVA Colombia and is offset by the call for BBVA preferred securities that were eligible as Tier 2 capital.

The process followed is shown below, according to the recommendations issued by the EBA and in line with the exercise of transparency conducted by the Bank. Based on the shareholders' equity reported in the Group's Annual Consolidated Financial Statements and by applying the deductions and adjustments shown in the table below, the regulatory capital figure for solvency purposes as of June 30, 2015 is arrived at:

	Millions of euros
Eligible capital resources	June 2015
Total equity (public balance sheet)	50,996
Capital	3,090
Share premium	23,992
Reserves	22,560
Other equity instruments	26
Own shares in portfolio	(75)
Attributed net income	2,759
Attributed dividend	(175)
Valuation adjustments	(2,909)
Minority interests	1,728
Shares and other eligible preferred securities	5,341
Deductions	(3,987)
Goodwill and other intangible assets	(3,650)
Fin. treasury stock	(110)
Indirect treasury stock	(227)
Equity not eligible at solvency level	(1,477)
Capital gains from the Sovereign AFS fixed-income portfolio	(1,031)
Capital gains from the AFS equity portfolio	(291)
Perimeter differences	(155)
Other adjustments and deductions	(2,110)
Tier 1 (before deductions)	48,763
(-) Tier 1 deductions	(5,341)
Tier 1	43,422

TABLE 3. Reconciliation of the Public Balance Sheet from the accounting perimeter to the regulatory perimeter

4. Information on Capital Requirements

4.1 Bank risk profile4.2 Details of capital requirements4.3 Variations in capital requirements

In accordance with article 92 of the CRR, the entities must at all times comply with the following capital requirements:

- a) Ordinary Tier 1 capital ratio of 4.5%, obtained as the level of ordinary Tier 1 capital expressed as a percentage on the total amount of the exposure to risk.
- b) Ordinary Tier 1 capital ratio of 6%, obtained as the level of ordinary Tier 1 capital expressed as a percentage on the total amount of the exposure to risk.
- c) Total capital ratio of 8%, obtained as the capital expressed as a percentage on the total amount of the exposure to risk.

The total amount of capital requirements is made up of the following items:

• Credit and dilution risk

Weighted exposures for credit and dilution risk, excluding the amount of risk-weighted exposures for the trading book. When calculating the risk-weighted exposures, the credit institutions may apply the standard method or the method based on internal ratings, when allowed by the competent authorities.

• Counterparty risk

Counterparty risk-weighted exposures for the trading book of repos and derivatives (section 5.3. of this document).

• Market risk

The capital requirements determined with respect to the debt and equity instrument position risk, the exchange-rate risk and the commodity risk.

• Exchange-rate risk

The capital requirements determined with respect to the exchange-rate risk, the liquidation risk and the commodity risk.

• Credit valuation adjustment risk

The capital requirements with respect to the credit valuation adjustment risk resulting from OTC derivative instruments that are not credit derivatives recognized for the purpose of reducing the amount of credit risk-weighted exposures.

• Operational risk

The capital requirements determined in accordance with title III of the CRR, with respect to operational risk.

In addition, as stated in section 1.2. of this document, Basel III, unlike the previous framework, introduces capital buffers as a complement to the minimum capital requirements. A transition period ending in 2019 has been established to facilitate the adaptation of financial institutions to the minimum capital requirements.

4.1. Bank risk profile

BBVA Group has a General Risk Control and Management Model (hereinafter, "the Model") adapted to its business model, organization and the geographical areas in which it operates. It allows it to operate within the framework of the control and risk management strategy defined by the Bank's corporate bodies and adapt to an economic and regulatory environment, addressing management globally and adapted to the circumstances at any particular time. The Model establishes a system of risk management that is adapted to the entity's risk profile and strategy.

The risks inherent in the business that make up the risk profile of BBVA Group are as follows:

- Credit risk: Credit risk arises from the probability that one party to a financial instrument will fail to meet its contractual obligations for reasons of insolvency or inability to pay and cause a financial loss for the other party. This includes counterparty risk, issuer credit risk, liquidation risk and country risk.
- Counterparty risk: Counterparty risk originates in the possibility of losses derived from positions in derivatives and repos.
- Market risk: Market risk originates in the possibility that there may be losses in the value of positions held due to movements in the market variables that affect the valuation of financial products and assets in trading activity.
- Operational risk: Operational risk is defined as the one that could potentially cause losses due to human errors, inadequate or faulty internal processes, system failures or external events. This definition includes legal risk, but excludes strategic and/or business risk and reputational risk.

- Structural risks: These are divided into structural interest-rate risk (movements in interest rates that cause alterations in an entity's net interest income and book value) and structural exchange-rate risk (exposure to variations in exchange rates originating in BBVA Group's foreign companies and in the provision of funds to foreign branches financed in a different currency to that of the investment).
- Liquidity risk: risk of an entity having difficulties in duly meeting its payment commitments, and where it does not have to resort to funding under burdensome terms which may harm the bank's image or reputation.

The chart below shows the total risk-weighted assets broken down by type of risk as of June 30, 2015:

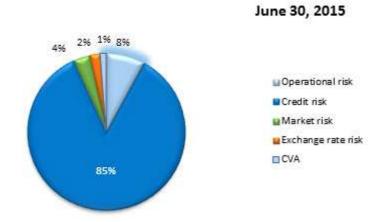

CHART 2. Breakdown of RWAs by type of risk

The greater weight of credit risk is explained by the composition of BBVA Group's portfolio, which is primarily made up of the loan book (59.8% of loan book on the total on-balance sheet assets).

4.2. Details of capital requirements

The third part of the CRR sets out the capital requirements, in accordance with the new Basel III framework, as well the techniques for calculating the different minimum regulatory capital ratios.

Below is the total capital requirements broken down by type of risk as of June 30, 2015 and December 31, 2014. The total amount for credit risk includes the positions in securitizations (standardized and advanced measurement approaches) and the positions in equity.

TABLE 4. Capital requirements by risk type

30th June 2015 (Millions of euros)

CAPITAL REQUIREMENTS
(1) Corresponding temporary Risk Weighted Assets (phased-in)

4.3 Variations in the period in terms of capital requirements

RWAs increased by €1,980 million in the six-month period. The most relevant impacts are:

• Standard credit risk

The incorporation of Catalunya Banc (+ \in 7,548 million) and the increase generated by the differences in third-country solvency regulations, currently being studied by the European Central Bank (+ \notin 2,600 million) have been partly offset by the move to advanced model portfolios from Unnim (- \notin 3,957 million). The rest of the increase is due mainly to positive increases of lending activity outside Spain.

• Advanced credit risk

The switch to advanced models of the portfolios from Unnim and the incorporation of Catalunya Banc have resulted in an increase of +€6,042 million, which has been offset mainly by the deleveraging of activity in Spain.

• Operational risk

The increase resulting from the integration of Catalunya Banc (\leq 1,643 million) has been offset particularly by the devaluation of the Venezuelan bolivar (- \leq 2,532 million).

• Equity

Affected mainly by the sale of BBVA Group's stake in CNCB (-€3,574 million), offset by the impact of the integration of Catalunya Banc (+€553 million) and the rest of increases resulting from variations in the market value and underlying book value (VTC) of the Group's holdings.

• Exchange-rate risk

Decrease due basically to the sale of BBVA Group's stake in CNCB and the corresponding decline in the long position in Chinese yuan (CNY) (-€1,667 million).

5. Credit Risk

- 5.1 Information on the standardized approach
- 5.2 Information on the IRB method
- **5.3 Information on counterparty risk**

Pursuant to article 5 of the CRR, with respect to the capital requirements for credit risk, exposure is understood to be any asset item and all items included in the Group's memorandum accounts involving credit risk and not deducted from the Group's eligible capital. Accordingly, mainly customer lending items are included, with their corresponding undrawn balances, letters of credit and collateral, debt securities and capital instruments, cash and deposits in central banks and credit institutions, assets purchased or sold under a repurchase agreement (asset and liability repos), financial derivatives and fixed assets.

In addition to the exposure to risk at the time of default and the risk-weighted assets, the table below shows the original exposure, the exposure net of provisions and the exposure applying the conversion factors under the standardized and advanced measurement approaches as of June 30, 2015 and December 31, 2014.

TABLE 5. Exposure to credit risk

(1) Gross exposure prior to the application of risk mitigation techniques.

(3) Exposures are adjusted solely by provisions in the case of exposures by the standardized approach.

(3) Admissible credit risk mitigation techniques are included for both on-balance and off-balance sheet exposures, pursuant to Chapter 4 of CRR.

(4) Corresponds to the value of the fully adjusted exposure by admissible credit risk mitigation techniques.
(5) Credit risk exposures at Default
(6) Risk Weighted Aassets calculated by the EAD multiplied by the RW

5.1. Information on the standardized approach

The tables below show the exposure amounts after the application of credit risk mitigation techniques for different risk weightings and for the different categories of exposure that correspond to the standardized method, excluding positions in securitizations, as of June 30, 2015 and December 31, 2014:

(1) This refers to the on-balance sheet amount in each exposure category, sorted by ratings.

(2)Amount not used included in memorandum accounts corresponding mainly to sums undrawn from credit lines and cards, as well as exposures in letters of credit and documentary credits. (3)This refers to exposure following the application of risk mitigation techniques.

(4) Value of the exposure in the event of default.

5.3. Information on counterparty risk

The original exposure for the counterparty risk of derivatives, according to part III, title II, Chapter 6 of the CRR, can be calculated using the following methods: original risk, mark-to-market valuation, standardized and internal models.

The Group calculates the value of exposure to risk through the mark-to-market method, obtained as the aggregate of the positive mark-to-market value after contractual netting agreements plus the potential future risk of each transaction or instrument.

Below are the amounts in million euros involved in the counterparty risk of derivatives as of June 30, 2015 and December 31, 2014:

TABLE 8. Counterparty risk. Exposure in derivatives. Netting effect and collateral

(Millions of euros)		
Derivatives exposure. Netting effect and collateral	June 2015	December 2014
Gross positive fair value of the contracts (accounting perimeter)	44,353	46,780
Gross positive fair value of the contracts (solvency perimeter)	46,636	48,911
Add-on	14,167	12,667
Positive effects of netting agreements	(28,912)	(30,961)
Credit exposure after netting and before collateral assigned	31,891	30,617
Collateral assigned	(4,073)	(4,395)
Credit exposure in derivatives after netting and before collateral assigned	27,819	26,222
RVAs	8,308	7,799

The total exposure to counterparty risk, composed basically of repo transactions and OTC derivatives, is €85,196 million as of June 30, 2015 (€93,506 million as of December 31, 2014).

Below are the EAD amounts after netting and collateral received from the derivatives, broken down by product as of June 30, 2015 and December 31, 2014:

6. Leverage ratio

6.1 Leverage ratio definition and composition

6.2 Details of the ratio

6.1. Definition of the leverage ratio

The leverage ratio (LR) is a regulatory measure (not risk-based) complementing capital designed to guarantee the soundness and financial strength of institutions in terms of indebtedness.

In January 2014, the Basel Committee on Banking Supervision published the final version of the "Basel III leverage ratio framework and disclosure requirements¹", which has been included through a delegated act that amends the definition of leverage ratio in the CRR regulation.

Pursuant to article 451, section 2 of the CRR, on June 15, 2015 the EBA published the final draft of the Implementing Technical Standard (ITS, leverage ratio disclosures) for breaking down the leverage ratio, which has been applied in this report.

The leverage ratio is defined as the quotient of eligible Tier 1 capital and exposure.

6.2. Details of the leverage ratio

The table below shows a breakdown of the items making up the leverage ratio as of June 30, 2015 and December 31, 2014:

	table of accounting assets and leverage ratio	6/30/2015	6/30/2015	12/31/2014	12/31/2014

.everage	ratio	6.2%	5.9%	6.2%	5.8%

TABLE 10. Elements comprising the leverage ratio

¹ http://www.bis.org/publ/bcbs251.htm

Described below are the elements making up the leverage ratio, in accordance with the "EBA FINAL draft Implementing Technical Standards on disclosure of the leverage ratio under Article 451(2) of Regulation (EU) No. 575/2013 (Capital Requirements Regulation – CRR) - Second submission following the EC's Delegated Act specifying the LR"**2** published by the EBA on June 15, 2015:

- Tier 1 capital (letter h in the above table): section 2.2. of this document presents details of the eligible capital, which has been calculated based on the criteria defined in the CRR.
- Exposure: as set out in article 429 of the CRR, the exposure measurement generally follows the book value subject to the following considerations:
 - On-balance-sheet exposures other than derivatives are included net of allowances and accounting valuation adjustments.
 - Measurement of the Group's total exposure is composed of the total assets as per financial statements adjusted for reconciliation between the accounting perimeter and the prudential perimeter.

Total exposure for the purpose of calculating the Group's leverage ratio is composed of the sum of the following items:

- a) On-balance asset positions: book balance of assets corresponding to the financial statements, excluding the derivative headings.
- b) Adjustments for reconciliation between the accounting perimeter and the solvency perimeter: the balance resulting from the difference between the accounting balance sheet and the regulatory balance sheet is included.
- c) Exposure in derivatives: the exposure referred to the EAD used in the measurement of capital use for counterparty risk, which includes both the replacement cost (market-to-market) and the future potential credit exposure (add-on). The cost of replacement is reported adjusted by the variation margin in cash and by effective notional amounts.
- Securities financing transactions (SFTs): in addition to the exposure value, an addition for counterparty risk determined as set out in article 429 of the CRR in included.
- e) Off-balance-sheet items: these correspond to risks and contingent liabilities and commitments associated with collateral, which are mainly available. A minimum floor of 10% is applied to the conversion factors (CCF), in line with article 429, section 10 a) of the CRR.
- f) Adjustments for intragroup exposures: The exposures of the Group's financial institutions and insurance companies that are consolidated at accounting level but not at regulatory level were included in this line in December 2014.
- g) Tier 1 deductions: all those amounts of assets that have been deducted in the determination of the eligible Tier 1 capital are deducted, in order not to duplicate exposures. The main deductions are intangible assets, loss carry forwards and other deductions defined in article 36 of the CRR and indicated in section 2.2. of this report.

² http://www.eba.europa.eu/regulation-and-policy/leverage-ratio/draft-implementing-technical-standards-its-on-disclosure-for-leverage-ratio/-/regulatoryactivity/press-release

There has been a decline in the leverage ratio as of June 2015, with respect to the fullyloaded leverage ratio for March (6.23%), basically due to an increase in assets explained by the integration of CatalunyaCaixa.

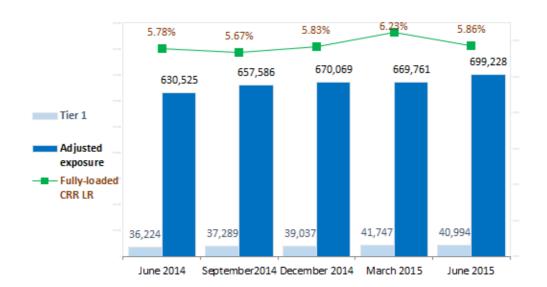

CHART 3: Trends in the leverage ratio

7. Subsequent events

The following events took place after the close of June 30, 2015.

Acquisition of an additional 14.89% in Garanti Bank

On November 19, 2014, the Group concluded a new agreement with Dogus Holding S.A., Ferit Faik Sahenk, Dianne Sahenk and Defne Sahenk (hereinafter "Dogus") on matters including the acquisition of 62,538,000,000 shares in Garanti (equivalent to 14.89% of the entity's share capital) for a total maximum payment of 8.90 Turkish lira per lot (Garanti trades in lots of 100 shares each).

The same agreement included the stipulation that if Dogus was paid a dividend against 2014 earnings, the amount would be deducted from the amount payable by BBVA. As of April 27, 2015, Dogus received the divided paid to Garanti shareholders of 0.135 Turkish lira per lot.

The Group concluded the purchase on July 27, once all the necessary regulatory authorizations had been obtained. Following the acquisition of the new shares, the Group's stake in Garanti stands at 39.9%.

The total price actually paid by BBVA is 8.765 Turkish lira per share (approximately 5,481 million Turkish lira or €1,854 million, applying an exchange rate of 2.9571 Turkish lira to the euro).

In accordance with the IFRS-EU, as a result of the coming into effect of the new agreement, BBVA Group will value the 25.01% stake held previously in Garanti (currently registered as a joint venture by the equity method) at fair value and consolidate the entire stake in Garanti, by applying the full consolidation method, into the BBVA Group's consolidated Financial Statements starting on the date of effective control.

The aforementioned valuation at fair value will have a non-recurring negative impact on the "Net income attributed to parent company" heading on the income statement of BBVA Group for the second half of 2015 of approximately €1,800 million. The recognition of this accounting impact will not mean any additional cash divestment for BBVA. Most of this impact consists of conversion differences, due to the depreciation of the Turkish lira against the euro in the period from the initial acquisition by BBVA of 25.01% of Garanti to the takeover. As of June 30, 2015, these conversion differences were already registered practically in full as valuation adjustments, lowering BBVA Group's equity on that date.

For solvency purposes, the biggest impact is mainly due to the increase in RWAs consolidated by BBVA Group on consolidating Garanti by applying the full consolidation method (from 25.01% to 100%).

In addition, this impact on capital due to a negative result is offset by the higher equity corresponding to minority interests in accordance with Regulation EU 575/2013 (CRR).

Thus the sum of all these effects is estimated to have an overall impact on the CET1 fullyloaded ratio of around a negative 50 basis points

Dividend paid in cash

At its meeting of July 1, 2015, the Board of Directors of BBVA approved the payment in cash of the first interim dividend against 2015 earnings for €0.08 gross (€0.0644 after the corresponding withholdings) for each of the outstanding shares, paid on July 16, 2015.

From July 1, 2015 to the date of this report, there have been no other events, other than those mentioned earlier, that materially affect BBVA Group's earnings or equity situation.

EU-11	Exposures in default	27,629	27,629	24,401	24,401
EU-12	Other exposures (eg equity, securitisations, and other non-credit obligation assets)	40,874	40,874	40,735	40,735

Glossary

Acronym	Description
	Set of proposals for reforming banking regulation, published after December 16, 2010 and to be implemented gradually
Basel III	by 2019.
BBVA	Banco Bilbao Vizcaya Argentaria.
BINs	Loss carry forwards.
BoS	Bank of Spain.
	Conversion factor: the ratio between the actual amount available for a commitment that could be used, and therefore, would
CCF (Credit Conversion Factor)	be outstanding at the time of default, and the actual amount available for the commitment.
	For the purpose of this Title and Title II, Chapter 6, "credit valuation adjustment" or "CVA" means a valuation adjustment at
	average market prices of the portfolio of transactions with a counterparty. This adjustment will reflect the current market value
	of the counterparty's credit risk with respect to the bank, but will not reflect the current market value of the bank's credit risk
CVA (Credit Valuation Adjustment)	with respect to the counterparty.
	Value adjustment for the entity's own credit risk: Need for a specific or generic provision to cover losses incurred for credit risk
DVA (Debt Valuation Adjustment)	that has been recognized in the entity's financial statements in accordance with the applicable accounting framework.
EAD (Exposure at Default)	Risk exposure at default.
EBA (European Banking Authority)	European Banking Authority.
ECB	European Central Bank.
	Ratio between the amount that is expected to be lost in an exposure -due to potential default by a counterparty or dilution
EL (Expected Loss)	over a 1-year period- and the amount outstanding at the time of default.
EO	Original risk exposure.
IRB (Internal Risk Based)	Internal models used by the Entity.
LCR (Liquidity Coverage Ratio)	Liquidity coverage ratio.
	Loss in the event of default: the ratio between the loss in an exposure due to default by the counterparty and the outstanding
LGD (Loss Given Default)	amount at the time of default.
NSFR (Net Stable Funding Ratio)	Ratio that seeks to calculate the percentage of long-term assets that are financed with stable funding.
PD (Probability of Default)	Probability of default of a counterparty during a one-year period.
PD-TTC (Through the Cycle)	Probability of default over the course of the cycle.
RW (Risk Weight)	Level of risk applied to exposures (%).
RWAs	Risk-Weighted Assets.
TIER I (CET 1)	First-tier capital (basic capital).
TIER II (CET 2)	Second-tier capital (second-class capital).
